Introduction

The next generation family of pressure transmitters are intelligent, open-loop, two-wire measuring devices that convert process pressure to a proportional analog and/or digital signal. The versatility of the Value, Advanced, and Performance transmitter families allow you to select the transmitter best suited for your application in terms of features, performance, and price.

Value Performance Transmitters

The competitively priced IAP05S, IGP05S, and IDP05S pressure transmitters provide a robust design without compromising quality. This transmitter family has been designed for applications requiring an accuracy of up to $\pm 0.075\%$ of span, and HART transmitters are SIL 2 certified.

- Remote communication capabilities
- Stability: $< \pm 0.05\%$ of URL/yr for 5 years
- Direct Connect AP/GP response time: < 100 ms
- SIL 2 as standard (HART)
- Robust design: 2-year warranty (optional 5-year warranty)
- DP and Biplanar AP/GP response time: < 125 ms
- High pressure measurement (direct connect GP) and low power options
- In-service time tracking (HART)
- High Turndown Capability¹ (up to 400:1)

Advanced Performance Transmitters

Considered the one transmitter that can do it all, the IAP10S, IGP10S, and IDP10S pressure transmitters cover most of your application needs with a single range. These transmitters offer embedded FoxCal™ technology and multiple points of calibration, which allow you to benefit from wide rangeability and one of the best reference accuracy turndowns on the market. These transmitters have an accuracy of up to $\pm 0.05\%$ of reading, and HART transmitters are SIL 2 certified.

- Remote communication capabilities
- Stability: $< \pm 0.03\%$ of URL/yr for 10 years
- Direct Connect AP/GP response time: < 100 ms²
- SIL 2 as standard (HART)
- Robust Design: 5-year warranty (optional 17-year warranty)
- DP and Biplanar AP/GP response time: < 125 ms²
- FoxCal™ technology
- In-service time tracking
- High Turndown Capability³ (up to 400:1)

Premium Performance Transmitters

Transmitters with high accuracy are required for the most demanding applications, and with an accuracy of up to $\pm 0.025\%$ of reading, the IAP50S, IGP50S, and IDP50S pressure transmitters fit the bill. These transmitters offer embedded FoxCal™ technology and multiple points of calibration, which allow you to benefit from wide rangeability and one of the best reference accuracy turndowns on the market. These transmitters also offer more exotic materials to accommodate severe environments, and HART transmitters are SIL 2 certified.

- Remote communication capabilities
- Stability: $< \pm 0.015\%$ of URL/yr for 10 years
- Direct Connect AP/GP response time: < 100 ms²
- SIL 2 as standard (HART)
- Robust Design: 5-year warranty (optional 17-year warranty)
- DP and Biplanar AP/GP response time: < 125 ms²
- FoxCal™ technology
- In-service time tracking
- High Turndown Capability³ (up to 400:1)

1. Turndown capability refers to Maximum span/Minimum span.

2. For FOUNDATION Fieldbus, this is the average time primary value is measured in the transducer block.

3. Turndown capability refers to Maximum span/Minimum span,

These pressure transmitters provide absolute pressure (AP), gauge pressure (GP), and differential pressure (DP) measurement.

- Absolute pressure transmitters measure pressure relative to vacuum. Gauge pressure transmitters measure pressure relative to ambient air pressure. Both absolute and gauge transmitters are used in a wide variety of oil, gas, water and industrial applications.
- Differential pressure transmitters measure the difference between *two* pressures applied to opposite sides of the sensor. The output signal is proportional to either the differential pressure or its square root.
 - Differential pressure transmitters are often used for measuring fluid flow rates across a primary device such as an orifice plate, but can also be used for other types of differential pressure measurements such as liquid level, interface level, or density measurements.

Transmitters can be connected in series to instruments such as recorders, controllers, and indicators.

This Document

This document discusses the Value Performance family of pressure transmitters. This family provides Absolute Pressure (AP), Gauge Pressure (GP), and Differential Pressure (DP) transmitter options that operate with HART, Modbus, or low power communication.

Key Features

The Value Performance pressure transmitters offer the following features:

- Absolute, Gauge, and Differential Pressure transmitters
- HART or Modbus digital outputs, 4 to 20 mA outputs (HART only), or low power analog outputs
- TÜV SIL 2 certification for HART transmitters
- 5-year proof test interval for pressure transmitters installed in SIL 2 Safety loops
- Accuracy up to $\pm 0.075\%$ of span
- Response time of 100 ms for AP/GP transmitters and 125 ms for DP transmitters
- Time in Service meter features cumulative power-up time and time powered since last user reset for HART and Modbus transmitters
- High Turndown Capabilities⁴ (up to 400:1)
- Ability to locally configure the device with pushbuttons on the local display (optional with HART and Modbus transmitters)
- Ability to remotely communicate with and configure the device using the device descriptor (DD), Device Type Manager (DTM), or the Field Device Integration (FDI) package. For Modbus, the ability to remotely communicate using the Modbus RTU.
- Optional External Zero Adjustment (HART and Modbus only)
- Field-proven piezoresistive silicon microsensors help ensure excellent measurement performance
- Simple, elegant sensor design with very few parts achieves exceptional reliability
- Durable aluminum or 316 ss housing options are available; both meet NEMA Type 4X and IEC IP66/67 ratings
- Differential pressure (DP) transmitters are available with traditional and low profile or Coplanar™ structures
- Sensor diaphragm materials include 316L ss or nickel alloy⁵
- ½ NPT male, ½ NPT female, or M20 male process connections
- Numerous mounting bracket set options
- Process venting and bleeding options
- Special degreasing and cleaning options
- Low temperature and high pressure options
- Custody transfer lock and seal options
- Many configurations of direct connect or capillary connected seals
- Dual Seal certified by CSA to meet ANSI/ISA 12.27.01-2003 requirements
- Complies with electromagnetic compatibility requirements of European EMC Directive 2014/30/EU by conforming to following EN and IEC Standard: EN 61326-1:2013
- NACE MR0175 and MR0103 compliant process wetted parts and bolt material available
- Optional certification options allow transmitters to meet numerous requirements for hazardous and non-hazardous locations
- CE marked; meets the requirements of applicable EMC, ATEX, RoHS, and PED European Union Directives
- Multi-marking protection concepts available for ATEX, CSA, FM, IECEx, and INMETRO

4. Turndown capability refers to Maximum span/Minimum span

5. Equivalent to Hastelloy® C-276. Hastelloy is a registered trademark of Haynes International, Inc.

- Standard 2-year warranty (optional 5-year warranty)

Transmitters Using HART Communication

Transmitters using HART communication provide the following features:

- Ability to remotely configure the device using a HART communicator or PC-based configurator
- Support for HART 7 communication protocol in single loop or multidrop mode
- Compliance with NAMUR NE 21 interference immunity requirement, and NAMUR NE 43 analog output overrange and underrange annunciations
- Interoperability tested and registered with the FieldComm Group

Transmitters Using Modbus Communication

Transmitters using Modbus communication provide the following features:

- Ability to configure the device locally or remotely. Use the optional LCD display to configure the transmitter locally or use a Modbus RTU host to configure the transmitter remotely.
- Uses a Modbus RTU (Remote Terminal Unit) mode over a two-wire RS-485 multidrop serial connection for communication at a baud rate up to 38400. The transmitter functions as a Modbus server device. Server (station) addresses are in the range of 1 to 247.

Low Power Transmitters

When you want the flexibility and performance of a configurable, intelligent transmitter but you don't need a digital output signal, low power transmitters provide exceptional benefits at an affordable price. These transmitters are low power, voltage output transmitters that provide precise, reliable measurement of gauge, absolute, and differential pressure, draw no more than 3 mA, and transmit a 1 to 5 V dc output signal.

Low Power transmitters provide the following features:

- Used with processes that do not need a digital output
- 1 to 5 V dc output signal
- 9 V dc minimum voltage
- 3 mA maximum current
- Offered at an affordable price

High Pressure Gauge Transmitters (Direct Connect GP Only)

High pressure, direct connect gauge transmitters provide the following features:

- Gauge pressure ranges to 105 or 210 MPa (15,000 or 30,000 psi)
- Digital output available with HART and Modbus, and analog output version can be either 4 to 20 mA or 1 to 5 V for low power installation
- Welded, stainless steel pressure capsule assembly with bonded strain gauge sensor provides an airtight and watertight seal as well as intrinsic overpressure protection

Safety Integrity Level (SIL)

In addition to the traditional Explosion Proof certifications (ATEX or IECEx), Pressure Transmitters with HART communication offer standard Safety SIL certification. Absolute, gauge, and differential transmitters can now be deployed for either standard or safety applications. The transmitters' model codes allow you to customize your transmitter with a red or yellow cover to identify that the transmitter is part of a safety loop. Safety SIL certification is performed by TÜV, an independent third-party laboratory.

Pressure transmitters can be used in SIL 2 safety functions in 1oo1 single mode or in SIL 3 safety functions in 1oo2, dual mode.

Figure 1 - Red or Yellow Covers to Indicate Safety Integrity Level

Acronyms and Definitions

Acronym	Definitions
FIT	Failures in Time (failures per 1E09 hours)
λ	Failure rate
λ_{DD}	Failure rate for Dangerous Detected
λ_{DU}	Failure rate for Dangerous Undetected
λ_S	Failure rate for Safe Detected + failure rate for Safe Undetected
PFD_{AVG}	Average Probability of Failure on Demand
PFH	Probability of Failure per Hour
SFF	Safe Failure Fraction
SIL	Safety Integrity Level

Reliability Data

Failure Data According to IEC 61508

λ	λ_s	λ_{DD}	λ_{DU}	SFF
1113 FIT	698 FIT	356 FIT	58 FIT	94.76%

The PFD_{AVG} value for a single pressure transmitter is 2.6E-4 per year.

Certification Data

- Safety SIL certification is performed by TÜV, an independent laboratory.
- The Pressure Transmitter is classified as a Type B device according to IEC 61508, having a hardware fault tolerance of 0.

NOTE: Type B component: “Complex” component (using microcontrollers or programmable logic); for details see section 7.4.4.1.3 of IEC 61508-2:2010.

- Based on internal diagnostics, the Pressure Transmitter has a Safe Failure Fraction of 94.76% (assuming that the logic solver is configured to detect over-scale and under-scale currents), and therefore may be used up to SIL 2 as a single device and up to SIL 3 redundantly (systematic capability SC3).
- The Pressure Transmitter has a proof test interval of up to five years in order to maintain a SIL 2 rating, allowing it to be used as a single device.

NOTE: Per Table 3 of IEC 61508-2:2010 section 7.4.4.2.2, the preceding information allows the Pressure Transmitter, when used in a 1 of 2 system architecture, to be used as a SIL 3 application with an HFT of 1.

Time in Service Meter

Similar to how an odometer allows an automobile owner to track the total number of miles driven and a trip odometer tracks the number of miles driven since a user-defined starting point, HART or Modbus transmitters allow you to keep track of the number of days the transmitter has been in service. The Time In Service meter tracks both the total number of days the transmitter has been powered up in the field over its lifetime (total days), and also tracks the number of days the transmitter has been powered up since the last Time in Service meter reset (user days). You can reset the user days value to zero locally with the local display or remotely with a HART communicator or a PC-based configurator on HART transmitters, or with a Modbus RTU host on Modbus transmitters. You cannot reset the lifetime service parameter.

Vacuum Service

AP and Biplanar GP Transmitters:

A lower range limit of -100 kPa (-14.7 psi, -1 bar) means that vacuum measurements are easily handled with the versatile direct connect AP, biplanar AP, or biplanar GP transmitters.

Direct Connect GP Transmitters:

A lower range limit of -100 kPa (-14.7 psi, -1 bar) allows vacuum limits for direct connect GP transmitters with Span Codes E, F, H, and J.

Variety of Materials

With process connections of 316L ss and sensor diaphragms available in 316L ss or nickel alloy⁶, direct connect AP/GP transmitters are an excellent choice for the majority of process pressure measurements.

DP transmitters with traditional structures are offered with a choice of 316L ss or nickel alloy⁶.

For DP and biplanar AP/GP transmitters with low profile structures, 316L ss and nickel alloy⁶ are offered as sensor materials. Refer to [Transmitter Structures for DP and Biplanar AP/GP Transmitters](#), page 13 for a description and application of traditional and low profile (LP1 and LP2) structures.

6. Equivalent to Hastelloy® C-276. Hastelloy is a registered trademark of Haynes International, Inc.

Design Specifications

Digital Liquid Crystal Display (LCD)

A two-line local digital display with on-board pushbuttons is provided by default with low power transmitters and as an option with HART and Modbus transmitters. The display can be rotated into any one of four 90 degree positions and shows the current measurement configured with your choice of units. The pushbuttons allow you to locally configure and calibrate the device, for example, by adjusting the zero and span. Pushbutton pads are designed to help protect the transmitter from electrostatic discharge and moisture.

Figure 2 - Digital LCD with On-Board Pushbuttons

Process Connectors for DP and Biplanar AP/GP Transmitters

Removable, gasketed process connectors allow a wide range of selections, including $\frac{1}{4}$ NPT, $\frac{1}{2}$ NPT, Rc $\frac{1}{4}$, Rc $\frac{1}{2}$, and weld neck connections.

Ease of Installation

Pressure transmitters are lightweight and easy to install, and are offered with:

- **Rotatable Topworks** allows transmitter installation in tight places, allows the display to be positioned in the preferred direction, and eases field retrofit.
- **Two Conduit Entrances** offer a choice of entry positions for ease of installation and self-draining of condensation regardless of mounting position and topworks rotation.
- **Wiring Guides and Terminations** provide ease of wire entry and support, plenty of space to work and store excess wire, and large, rugged screw terminals for easy wire termination.
- **Two-Valve Manifolds**, which isolate and vent pressure from biplanar GP transmitters, can be easily mounted directly to transmitter.

Optional Mounting Bracket Sets for DP and Biplanar AP/GP Transmitters

Mounting bracket sets allow you to mount the transmitter to a surface, pipe, or manifold. In addition to the standard-style mounting bracket sets available, a unique universal style mounting bracket has been developed to allow wide flexibility in transmitter mounting configurations consistent with installation requirements. Refer to Dimensions, page 61.

Unique Process Cover and Cell Body Design for DP and Biplanar AP/GP Transmitters

Biplanar Construction maintains the traditional horizontal process connections and vertical mounting by providing a cell body contained between two process covers, while still achieving light weight, small size, and high standard static pressure rating of 25 MPa (3626 psi). This design provides easy retrofit of any conventional differential pressure transmitter, and also allows the transmitter to be easily mounted in the horizontal position with vertical process connections.

Figure 3 - Biplanar Construction Shown with Traditional Horizontal Process Connections

- **Process Covers** are fully supported by the cell body over their entire height. This helps prevent bending and results in a firm seal. Also, this provides dimensional stability to the process covers, helping ensure they will mate properly with 3-valve bypass manifolds.
- **Process Cover Bolts** are enclosed to minimize corrosion and to minimize early elongation with rapid temperature increases. The design makes it less likely for the transmitter to release process liquid during a fire.
- **Process Cover Gaskets** are PTFE as standard; PTFE provides nearly universal corrosion resistance, so you do not need to select and stock various elastomers to provide process compatibility.
- **Light Weight** provides ease of handling, installation, and direct mounting without requiring costly pipe stands.

Transmitter Structures for DP and Biplanar AP/GP Transmitters

For DP and biplanar AP and GP transmitters, traditional and low profile structures (LP1 and LP2) are offered to accommodate and to provide flexibility in transmitter installations.

Traditional Structure for DP and Biplanar AP/GP Transmitters

The traditional structure utilizes the right angle design common to most DP and biplanar AP/GP transmitters in use throughout the world. Process connections are oriented 90 degrees from the transmitter centerline. This traditional structure makes it easy to retrofit any transmitters of similar design.

Figure 4 - Vertical Mounting Showing Process Connections at 90 Degrees

Sensor cavity venting and draining is provided for both vertical and horizontal transmitter installation, using innovative tangential connections to the sensor cavity. Optional side vents are offered for sensor cavity venting in the upright position.

Figure 5 - Vertical Mounting – Cavity Draining

Figure 6 - Horizontal Mounting – Cavity Venting, and Self-Draining into Process Line

Figure 7 - Vertical Mounting – Cavity Venting, and Self-Draining into Process Line

Low Profile Structures for DP and Biplanar AP/GP Transmitters

The low profile structures use an in-line design, meaning that the process connections are in line with the transmitter centerline. This allows you to mount the transmitter in the upright position with the process connections facing downward for connection to vertical process piping or for mounting directly to a three- or five-valve manifold.

For convenience, two types of low profile structures are offered, LP1 and LP2. The process covers and the external shape of the sensor cell body are the only transmitter parts that differ between LP1 and LP2.

Figure 8 - Low Profile (LP1) Structure with In-Line Process Connections

Figure 9 - Low Profile (LP1) Structure Directly Mounted to Manifold

The low profile structures provide a mounting style similar to that used by competitive Coplanar™ transmitters. This makes it easy to select these transmitters for both retrofit and new applications where this type of installation is desired.

Transmitters with the low profile structure can be attached directly to existing, installed Coplanar manifolds, such as the Anderson Greenwood Models MB3, MB5G, and MB5P by using an optional adapter plate. See [Low Profile \(LP1\) Transmitter – Mounted to a Coplanar Manifold using an Optional Intermediate Adapter Plate](#), page 15. Also, when assembled to the same process piping or manifold as a Coplanar transmitter, one of the electrical conduit connections is located within ± 1 inch of the similar conduit connection on the competitive transmitter, providing for ease of retrofit or conformance with installation design drawings.

Low Profile Structure LP1 – Direct Mount

Low Profile Structure LP1 is a compact, inexpensive, lightweight design that you can mount directly to a separately mounted manifold or to process piping. These transmitters are not typically bracket-mounted.

By default, LP1 transmitters are supplied with a single vent/drain screw in the side of each process cover. In conjunction with the standard tangential venting and draining design, they are suitable for mounting either vertically or horizontally, and are suitable for most applications, including liquids, gases, and steam.

In the vertical, upright position, the LP1 transmitter is self-draining and is ideal for gas flow rate service when directly mounted to a manifold located above the horizontal pipeline. If desired, you can omit the vent screw for this or other applications.

Figure 10 - Low Profile (LP1) Transmitter – Upright Mounting**Figure 11 - Low Profile (LP1) Transmitter – Mounted to a Coplanar Manifold Using an Optional Intermediate Adapter Plate**

For horizontal installations, rotate the transmitter 180 degrees to orient the high and low pressure sides to the preferred locations. You do not need to unbolt process covers. You can also rotate the topworks housing as shown to orient the conduit connections in the desired position.

Figure 12 - Low Profile (LP1) Transmitter – Horizontal Mounting with Vent Screw**Figure 13 - Low Profile (LP1) Transmitter – Horizontal Mounting with Drain Screw**

Low Profile Structure LP2 – Bracket or Direct Mount

Low Profile Structure LP2 is a universal design for either bracket or direct mounting. Drilled and tapped mounting holes facilitate mounting to either new or existing Schneider Electric brackets (Options -M1, -M2, and -M3), as well as standard brackets supplied with existing Coplanar™ transmitters.

These transmitters can also be directly mounted to manifolds or process piping and are available with the same optional adapter used with low profile structure LP1 to fit existing Coplanar manifolds.

For extra convenience, they use a vent and drain design, with separate vent and drain screws positioned in each cover for venting or draining directly from the sensor cavity. They are normally recommended for upright, vertical installation.

Figure 14 - Low Profile (LP2) Transmitter – Mounted on the Schneider Electric Universal Bracket

Figure 15 - Low Profile (LP2) Transmitter – Shown on a Coplanar Bracket

Figure 16 - Low Profile (LP2) Transmitter – Mounted to an Existing Coplanar Manifold Using Adapter Plate

Factory Calibration

Prior to shipment, the factory performs a 2-point calibration on the transmitter based on the calibration range and units you require. A 2-point calibration is useful if your application requires zero-based ranges with greater than 30:1 turndown or when mandated by a specific requirement. Simply indicate the calibration range and units you require in the sales order. See [Units](#), page 33.

Table 1 - Example of Custom Factory Calibration Option -C1 for a HART Transmitter

Parameter	Standard (Default) Configuration	Example of Custom Factory Calibration (Option -C1)
Calibrated Range		
Pressure Engineering Units (EGUs)	per sales order ⁷	inH ₂ O
LRV	per sales order ⁸	0
URV	per sales order ⁹	100
Measurement #1		
Linear (pressure units, AP or GP) or Square Root (flow units, DP only)	Linear	Square Root
Pressure EGU (AP, GP, DP) or Flow EGU (DP only)	per sales order ¹⁰	gal/m
Range (DP)	per sales order ⁹	0 to 500 gal/m
Output	4 to 20 mA ¹¹	4 to 20 mA ¹¹
Measurement #2		
Linear (pressure units, AP or GP) or Square Root (flow units, DP only)	Linear	Square Root
Pressure EGU (AP, GP, DP) or Flow EGU (DP only)	per sales order ¹⁰	gal/m
Range (DP)	per sales order ⁹	0 to 500 gal/m

Table 2 - Example of Custom Factory Calibration for a Low Power Transmitter

Parameter	Standard (Default) Configuration	Example of Custom Factory Calibration
Calibrated Range		
Pressure Engineering Units (EGUs)	per sales order ⁷	inH ₂ O
LRV	per sales order ⁸	0
URV	per sales order ⁹	100
Measurement #1		
Linear (pressure units)	Linear	Square Root
Pressure Engineering Units (EGUs)	per sales order ⁷	gal/m
Range (DP)	per sales order ⁹	0 to 500 gal/m
Output	1 to 5 V dc	1 to 5 V dc
Measurement #2		
Linear (pressure units)	Linear	Square Root
Pressure Engineering Units (EGUs)	per sales order ¹²	gal/m
Range (DP)	per sales order ⁹	0 to 500 gal/m

7. Pressure units from Units, page 33. If not specified, the factory default calibration is zero to maximum span and the default units vary by sensor code.

8. Within Span and Range Limits for selected sensor code.

9. Same as Calibrated Range.

10. Pressure or flow units from Units, page 33. If not specified, the factory default calibration is zero to maximum span and the default units vary by sensor code.

11. Fixed current is used for multidrop applications.

12. Pressure or flow units from Units, page 33. If not specified, the factory default calibration is zero to maximum span and the default units vary by sensor code.

Table 3 - Example of Custom Factory Calibration Option -C1 for a Modbus Transmitter

Parameter	Standard (Default) Configuration	Example of Custom Factory Calibration (Option -C1)
Pressure Engineering Units (EGUs)	per sales order ¹³	inH ₂ O
Output	Primary Value	Primary Value
Measurement #2		
Linear (pressure units)	Linear	Linear
Pressure EGU (AP, GP, DP) or Flow EGU (DP only)	per sales order ¹⁴	inH ₂ O

Optional Factory Configuration (Option -C2)

You also have the option to have the transmitter configured by the factory prior to shipment by selecting Model Code Option -C2. For the transmitter to be custom configured by the factory, you must fill out a data form. If this option is not selected, a standard (default) configuration is provided.

In addition to the example parameters listed in the table, the data form allows you to configure any of the transmitter's user-configurable parameters.

Table 4 - Example Parameters: Factory Configuration Option -C2 for a HART Transmitter

Parameter	Standard (Default) Configuration	Example of Factory Configuration (Option -C2)
Calibrated Range		
Pressure Engineering Units (EGUs)	per sales order ¹³	inH ₂ O
LRV	per sales order ¹⁵	0
URV	per sales order ¹⁶	100
Measurement #1		
Linear (pressure units, AP or GP) or Square Root (flow units, DP only)	Linear	Square Root
Pressure EGU (AP, GP, DP) or Flow EGU (DP only)	per sales order ¹⁴	gal/m

Range (DP)	per sales order ²³	0 to 100

Diaphragm Seals

Diaphragm seals are used when it is necessary to keep the transmitter isolated from the process. A sealed system is used for a process fluid that may be corrosive, viscous, subject to temperature extremes, toxic, sanitary, or that may tend to collect and solidify.

Diaphragm seals can be used with direct connect AP/GP transmitters as well as DP and biplanar AP/GP transmitters that have a traditional structure (see [Transmitter Structures for DP and Biplanar AP/GP Transmitters](#), page 13).

NOTE: When used with diaphragm seals, the accuracy specifications for Value Performance transmitters do not apply.

The following table describes each diaphragm seal and indicates with which transmitter types the seal can be used. To order a transmitter with seals, select both a transmitter model code and a seal model code. See PSS 2A-1Z11 B for diaphragm seal model codes and specifications.

Table 7 - Diaphragm Seals

Model	Description	Process Connections ²⁴
Direct Connect Diaphragm Seal Assemblies		
DS-N	Diaphragm Seal Flanged (Through Bolt)	ASME CL150–2500; EN1092 PN1–100; JIS 10K, 16K, 20K
DS-M	Diaphragm Seal Flanged (Stud Bolt)	ASME CL150–2500; EN1092 PN1–100; JIS 10K, 16K, 20K
DS-H	Diaphragm Seal Flanged Extended	ASME CL150–2500; EN1092 PN1–100; JIS 10K, 16K, 20K
DS-F	Diaphragm Seal Flanged (One Piece Construction)	ASME CL150–2500; EN1092 PN1–100; JIS 10K, 16K, 20K
DS-G	Diaphragm Seal Flanged (Multi Piece Construction)	ASME CL150–2500; EN1092 PN1–100; JIS 10K, 16K, 20K

25. See PSS 2A-1Z11 B for specific process size, connections, and face.

Physical Specifications

Transmitter Materials and Construction

Housing and Housing Cover Design

The housing has two compartments to separate the electronics from the field connections. The housing and covers are made from low copper (0.6% maximum) die-cast aluminum alloy with an epoxy finish, or from 316 ss.

O-ring seals are used to seal the threaded housing covers, housing neck, and terminal block.

Process Wetted Materials

Table 8 - Process Covers and Connections

Transmitter Type	Materials
Direct Connect AP/GP	316L ss
Biplanar AP/GP	316 ss
DP	316 ss

Table 9 - Process Cover Nuts and Bolts

Transmitter Type	Materials
Biplanar AP/GP	ASTM A193, Grade B7 high strength alloy steel for bolts, and ASTM A194 Grade 2H high strength alloy steel for nuts are standard. Options include NACE Class B7M bolting, 17-4 ss bolting, and 316 ss bolting.
DP	

Table 10 - Sensor Diaphragm

Transmitter Type	Materials
Direct Connect AP/GP	316L ss or nickel alloy ²⁶
Biplanar AP/GP	316 ss or nickel alloy ²⁶
DP ²⁷	316L ss or nickel alloy ²⁶

Table 11 - Gaskets

Transmitter Type	Materials
Direct Connect AP/GP Biplanar AP/GP DP	Glass-filled PTFE

Reference (Low) Pressure Side Materials (All Transmitters) and Reference (Atmospheric) Pressure Side Materials (GP Only)

Silicone, Pyrex, RTV silicone, or 316L ss

26. Equivalent to Hastelloy® C-276. Hastelloy is a registered trademark of Haynes International, Inc.

27. For exceptional value and corrosion resistance, 316L ss is the least expensive material.

Sensor Fill Fluid

- Silicone fluid — dodecamethylpentasiloxane
- 3M™ Fluorinert™ Electronic Liquid FC-43 — perfluorotributylamine
- NEOBEE® M-20 — propylene glycol di(octanoate/decanoate)

Environmental Protection

The transmitter's enclosure has the weatherproof, dust-tight, and water-tight rating of IP66/67 as defined by IEC 60529, and provides the environmental and corrosion resistant protection rating of NEMA Type 4X.

Electronics Module

Printed wiring assemblies are potted or conformally coated for moisture and dust protection.

Mounting Position

The transmitter can be mounted in any orientation. The housing can be rotated up to one full turn to any desired position for access to adjustments, display, or conduit connections.

The display can also be rotated at 90° increments within the housing.

NOTE:

- Mount the transmitter so that any moisture condensing or draining into the field wiring compartment can exit through one of the two threaded conduit connections.
- Use a suitable thread sealant on all connections.
- Position effect zero shift for all calibrated spans can be calibrated out by readjusting zero output after installation.

Approximate Mass

Transmitter mass does not include diaphragm seals.

Transmitter and Option(s)	Approximate Mass
Direct Connect AP or GP, Aluminum Housing	1.4 kg (3.1 lb)
Biplanar or Traditional DP Structure, Aluminum, without Process Connectors	3.5 kg (7.8 lb)
Biplanar or Traditional DP Structure, Aluminum, with Process Connectors	4.2 kg (9.2 lb)
Optional Display	Add 0.2 kg (0.4 lb)
Substitute 316 ss Housing	Add 1.1 kg (2.4 lb)
Low Profile/Biplanar LP1 Structure	Add 0.1 kg (0.2 lb)
Low Profile/Biplanar LP2 Structure	Add 0.8 kg (1.8 lb)

Functional Specifications

Span and Range Limits

Limits for Direct Connect (AP or GP) Transmitters

Table 12 - Span Limits for Direct Connect Transmitters with HART or Modbus Communication (Electronics Version -T or -M)

Code	Span Limits ²⁸
C	6.9 and 207 kPa (1 and 30 psi) ²⁹
D	3.4 and 1380 kPa (0.5 and 200 psi)
E	0.034 and 13.8 MPa (5 and 2000 psi)
F	0.52 and 41.4 MPa (75 and 6000 psi) ³⁰
H	69 and 207 MPa (10000 and 30000 psi) ³⁰
J	6.9 and 69 MPa (1000 and 10000 psi) ³⁰

Table 13 - Span Limits for Direct Connect Transmitters with Low Power (Electronics Version -V)

Code	Span Limits ²⁸
C	6.9 and 207 kPa (1 and 30 psi)
D	69 and 1380 kPa (10 and 200 psi)
E	0.69 and 13.8 MPa (100 and 2000 psi)
F	13.8 and 41.4 MPa (2000 and 6000 psi) ³⁰
H	69 and 207 MPa (10000 and 30000 psi) ³⁰
J	6.9 and 69 MPa (1000 and 10000 psi) ³⁰

Table 14 - Range Limits for Direct Connect Transmitters

Code	Range Limits — AP	Range Limits — GP
C	0 and 210 kPaa (0 and 30 psia)	0 and 210 kPag (0 and 30 psig)
D	0 and 1400 kPaa (0 and 200 psia)	0 and 1400 kPa (0 and 200 psig)
E	0 and 14 MPaa (0 and 2000 psia) ³¹	0 and 14 MPag (0 and 2000 psig) ³¹
F	n/a	0 and 42 MPag (0 and 6000 psig) ³¹
H	n/a	0 and 210 MPag (0 and 30000 psig) ³¹
J	n/a	0 to 69 MPag (0 to 10000 psig) ³¹

28. Values listed are in absolute or gauge pressure units, as applicable.

29. Not available with Electronics Version -M.

30. Available for gauge pressure transmitters only.

31. This direct connect range can withstand and indicate a vacuum condition down to a full vacuum, but cannot be ranged to that condition.

Limits for Biplanar (AP or GP) Transmitters

Table 15 - Span Limits for Biplanar Transmitters with HART or Modbus Communication (Electronics Version -T or -M)

Code	Span Limits ³²
A	0.12 and 7.5 kPa (0.5 and 30 inH ₂ O) ³³
B	0.12 and 50 kPa (0.5 and 200 inH ₂ O)
C	0.62 and 250 kPa (2.49 and 1000 inH ₂ O)
D	26 and 2070 kPa (3.75 and 300 psi)
E	0.26 and 20.7 MPa (37.5 and 3000 psi) ³⁴
F	1.1 and 34.5 MPa (165 and 5000 psi) ^{33 34}

Table 16 - Span Limits for Biplanar Transmitters with Low Power (Electronics Version -V)

Code	Span Limits ³²
A	0.12 and 7.5 kPa (0.5 and 30 inH ₂ O) ³³
B	0.87 and 50 kPa (3.5 and 200 inH ₂ O)
C	6.9 and 250 kPa (27.8 and 1000 inH ₂ O)
D	69 and 2070 kPa (10 and 300 psi)
E	0.69 and 20.7 MPa (100 and 3000 psi) ³⁴
F	1.38 and 34.5 MPa (200 and 5000 psi) ^{33 34}

Table 17 - Range Limits for Biplanar Transmitters

Code	Range Limits — AP	Range Limits — GP
A	n/a	-7.5 and +7.5 kPag (-30 and +30 inH ₂ Og)
B	0 and 50 kPaa (0 and 200 inH ₂ Oa)	-50 and +50 kPag (-200 and +200 inH ₂ Og)
C	0 and 250 kPaa (0 and 1000 inH ₂ Oa)	-100 and +250 kPag (-400 and +1000 inH ₂ Og)
D	0 and 2100 kPaa (0 and 300 psia) ³⁴	-100 and +2100 kPag (-14.7 and +300 psig) ³⁴
E	0 and 21 MPaa (0 and 3000 psia) ³⁴	-0.1 and +21 MPag (-14.7 and +3000 psig) ³⁴
F	n/a	-0.1 and +35 MPag (-14.7 and +5000 psig) ³⁴

32. Values listed are in absolute or gauge pressure units, as applicable.

33. Available for gauge pressure transmitters only.

34. Span limit, maximum working pressure, maximum overrange pressure, and maximum static pressure (d/p) are derated for optional IEC 61518 Construction and optional Bolting except for codes -D3, -D7, and -B2. Option -D1 is derated to 2320 psi. Options -D5 and -B1 are derated to 2175 psi. Options -D2, -D4, -D6, and -D8 are derated to 1500 psi. Option -B3 is derated to 2900 psi.

Limits for DP Transmitters

Table 18 - Span Limits for DP Transmitters with HART or Modbus Communication (Electronics Version -T or -M)

Code	Span Limits
A	0.12 and 7.5 kPa; 0.5 and 30 inH ₂ O; 1.2 and 75 mbar
B	0.12 and 50 kPa; 0.5 and 200 inH ₂ O; 1.2 and 500 mbar
C	0.62 and 250 kPa; 2.5 and 1000 inH ₂ O; 6.22 and 2500 mbar
D	0.026 and 2.07 MPa; 3.75 and 300 psi; 0.26 and 20.7 bar
E	0.26 and 20.7 MPa; 37.5 and 3000 psi; 2.6 and 207 bar

Table 19 - Span Limits for DP Transmitters with Low Power (Electronics Version -V)

Code	Span Limits
A	0.12 and 7.5 kPa; 0.5 and 30 inH ₂ O; 1.2 and 75 mbar
B	0.87 and 50 kPa; 3.5 and 200 inH ₂ O; 8.7 and 500 mbar
C	7 and 250 kPa; 28 and 1000 inH ₂ O; 70 and 2500 mbar
D	0.069 and 2.07 MPa; 10 and 300 psi; 0.69 and 20.7 bar
E	0.69 and 20.7 MPa; 100 and 3000 psi; 6.9 and 207 bar

Table 20 - Range Limits for DP Transmitters

Code	Range Limits
A	-7.5 and +7.5 kPa (-30 and +30 inH ₂ O)
B	-50 and +50 kPa (-200 and +200 inH ₂ O)
C	-250 and +250 kPa (-1000 and +1000 inH ₂ O)
D	-0.103 and +2.1 MPa (-30 and +300 psi)
E	0 and 21 MPa (0 and 3000 psi)

Maximum Static, Overrange, and Proof Pressure Ratings

DANGER

HAZARD OF EXPLOSION

Exceeding the proof pressure can cause the sensor to rupture forcefully. Avoid exposing the transmitter to the proof pressure limit.

Failure to follow these instructions will result in death or serious injury.

NOTICE

POTENTIAL EQUIPMENT DAMAGE

Exceeding the overrange pressure limit for the transmitter can cause damage to the transmitter, degrading its performance. The transmitter could become nonfunctional after exceeding the overrange pressure. Avoid exposure to the overrange pressure limit.

Failure to follow these instructions can result in equipment damage.

Ratings for Direct Connect AP and GP Transmitters

Table 21 - Maximum Overrange and Proof Pressure for Direct Connect Transmitters

Span Limit Code	Maximum Overrange Pressure	Maximum Proof Pressure ³⁵
C	0.38 MPa (54 psi)	0.99 MPa (144 psi)
D	2.1 MPa (300 psi)	5.51 MPa (800 psi)
E	20.7 MPa (3,000 psi)	55.1 MPa (8,000 psi)
F ³⁶	59.1 MPa (8,580 psig)	165 MPa (24,000 psig)
H ³⁶	231 MPa (33,000 psig)	567 MPa (81,000 psig)
J ³⁶	99 MPa (14,300 psig)	180 MPa (26,015 psig)

Ratings for DP Transmitters and Biplanar AP and GP Transmitters

For DP transmitters and for AP and GP transmitters with biplanar structures, pressure ratings may be affected by bolting options and other model code selections.

Table 22 - Maximum Static/Overrange and Proof Pressure for DP and Biplanar Transmitters

Transmitter Configuration ³⁷	Maximum Static ³⁸ and Overrange Pressure ³⁹	Maximum Proof Pressure ³⁵
Standard (B7 steel) with Span Codes A to E, or with Option -B2 (17-4 PH ss), -D3, -D7, -P3, or -P7	25 MPa (3,626 psi)	100 MPa (14,500 psi)
Standard with Span Code F ³⁶	40 MPa (5,800 psi)	100 MPa (14,500 psi)
Option -B3 (B7M), -P4, or -P8	20 MPa (2,900 psi)	77 MPa (11,150 psi)
With Option -D1	16 MPa (2,320 psi)	64 MPa (9,280 psi)
Option -B1 (316 ss), -D5, -P2, or -P6	15 MPa (2,175 psi)	60 MPa (8,700 psi)
With Option -D2, -D4, -D6, or -D8 ⁴⁰	10 MPa (1,500 psi)	40 MPa (6,000 psi)
Option -D9 (17-4 PH ss) or -Y ⁴¹	40 MPa (5,800 psi)	100 MPa (14,500 psi)

35. Meets ANSI/ISA Standard S82.03-1988.

36. Available for gauge pressure transmitters only.

37. Refer to the model code for option descriptions, and for applications and restrictions related to the items listed in the table.

38. Static pressure is relevant only for differential pressure transmitters.

39. Either side can be at higher pressure during overrange.

40. Limited to operating temperatures ranging from -10 to +80°C (14 to 176°F).

41. Differential pressure transmitters only.

Elevated Zero and Suppressed Zero

For applications requiring an elevated or suppressed zero, do not exceed the maximum span and the upper and lower range limits of the transmitter.

Output Signal

For HART transmitters, 4 to 20 mA dc square root (for DP only) or 4 to 20 mA dc linear with digital HART communication. The output is software-selectable and remotely configurable from the HART Communicator, and locally configurable with the pushbuttons on the optional display. HART 7 allows the mA signal to be fixed or live when multidrop is enabled.

For Modbus transmitters, digital information is conveyed using the Modbus RTU protocol over an RS-485 interface communicating at a baud rate of up to 19200. The output is configured via the front panel or Modbus.

For low power transmitters, 1 to 5 V dc square root (for DP only) or 1 to 5 V dc linear; software-selectable. The output is locally configurable with the pushbuttons on the display.

Minimum Allowable Absolute Pressure vs Process Temperature

- With silicone fill fluid: up to 121°C (250°F) at full vacuum
- With inert fill fluid: refer to the graph

Supply Voltage

HART Transmitters

The power supply must be capable of providing 22 mA when the transmitter is configured for 4 to 20 mA output. Ripple of up to 2 V pp (50/60/100/120 Hz) is tolerable, but instantaneous voltage must remain within the specified range.

The supply voltage and loop load must be within specified limits. Nominal minimum supply voltage is 12.5 V dc. The supply output load vs. voltage relationship, shown in the following graph, is $R_{\max} = 47.5 (V - 12.5 \text{ V dc})$.

You can use any combination of supply voltage and loop load resistance in the shaded area shown in the graph below. To determine the loop load resistance (transmitter output load), add the series resistance of each component in the loop, excluding the transmitter.

Figure 18 - 4 to 20 mA Output Supply Voltage vs Output Load

NOTES:

1. The minimum voltage for HART communication is 15.5 V dc.
2. The minimum load for the HART Communicator is 250 ohms.
3. The transmitter can function with an output load less than the minimum, but using a remote configurator while operating in this area will result in output and/or communication disturbances.

	HART Communication	No HART Communication
Minimum Resistance	250 Ω	0 Ω
Minimum Supply Voltage	15.5 V dc	12.5 V dc
Maximum Supply Voltage	42 V dc	

Modbus Transmitters

The following table summarizes the requirements.

Minimum Supply Voltage	9 V dc
Maximum Supply Voltage	30 V dc
Supply Current	Average current of 4 mA at 9 V dc under reference conditions with no Modbus communication

Low Power Transmitters

The power supply must be capable of providing at least 3 mA current under all conditions.

Minimum Supply Voltage	9 V dc
Maximum Supply Voltage	30 V dc
Minimum Impedance	0 Ω
Maximum Impedance	2,160 Ω

Square Root Low Flow Cutoff for DP Transmitters

The square root low flow cutoff is configurable using a field communicator, PC-based configurator, or the local display. The square root low flow cutoff can be set to:

- Cutoff to zero at any flow rate between 0 and 20% of maximum flow
- Cutoff to zero at flows <10% of maximum flow (1% of maximum differential pressure)
- Active point-to-point line between zero and 20% of maximum flow (4% of maximum differential pressure)

Current Outputs for Low and High Alarms, Underrange, Overrange, Offline, and Other Conditions (HART Only)

Output for Low Alarm	≤ 3.60 mA
Output for High Alarm	≥ 21.00 mA
Output when underrange	3.8 mA
Output when overrange	20.50 mA
Output if the sensor is potentially bad	Configurable to either the high value or low value
Output when offline	Configurable to a constant value between 3.6 mA and 21.0 mA

Adjustable Damping

HART (-T) and Modbus (-M) Transmitters:

Damping is user-selectable to values of 0, 0.25, 0.5, 1, 2, 4, 8, 16, or 32 seconds.

Selecting a value of **DAMP 0** in the Damping menu provides the fastest response (HART only).

Low Power (-V) Transmitters:

Damping is user-selectable to values of 0, 2, 4, or 8 seconds.

Field Wiring Reversal

HART (-T) and Low Power (-V) Transmitters:

Reversal of field wiring does not damage the transmitter, provided the current is limited to 1 A or less by active current limiting or loop resistance. However, the transmitter is polarity-sensitive.

NOTE: Sustained currents of 1 A do not damage the electronics module or sensor, but can damage the terminal block assembly and external instruments in the loop.

Modbus (-M) Transmitters:

The power connections on the transmitter have reverse polarity protection. Reversing the field wiring does not damage the transmitter; the transmitter functions when wired either way.

Write Protect Jumper (HART and Modbus Transmitters Only)

The transmitter has a write protect jumper that can be positioned to lock out configurators from making transmitter database changes.

Figure 19 - Write Protect Jumper

Zeroing For Nonzero-Based Ranges

You can zero the transmitter when it is open to atmosphere, even when there is a nonzero-based range. This greatly simplifies position effect zeroing on many pressure and level applications. To zero the transmitter, you can use the local display, a PC-based configurator, Modbus host, or the optional External Zero Adjustment button.⁴²

Calibrated Range

The calibrated range of the transmitter is defined as the input range within span and range limits. The transmitter's calibrated range can be expressed in pressure units or flow units, depending on the communication protocol and whether the transmitter is in linear mode or square root mode.

Measurement Values

Output Measurement #1 – Digital Primary Variable and 4 to 20 mA

Mode: Linear or Square Root

Pressure units for AP, GP, and DP transmitters in linear mode and flow units for DP transmitters⁴³ in square root mode are provided in [Units](#), page 33.

42. The External Zero Adjustment button is not available with low power transmitters.

43. With HART (-T) Communication only.

Output Measurement #2 – Digital Secondary Variable

Mode: Linear or Square Root

Pressure units for AP, GP, and DP transmitters in linear mode and flow units for DP transmitters in square root mode, independent of Measurement #1, are provided in Units, page 33.

Units

Table 23 - Allowable Units for Transmitters in Linear and Square Root Mode

Communication Protocol and Transmitter Mode	Units ⁴⁴
Pressure Units for HART and Modbus Transmitters in Linear Mode	inH2O, ftH2O, mmH2O, inHg, mmHg, cmHg, mHg, psi, psf, mbar, bar, g/cm2,, kg/cm2, kg/m2,, Pa, hPa, kPa, MPa, torr, inWC60, ftWC60, inWC4, ftWC4, mmWC4, cmWC4, mWC4, atm, dy/cm2
Flow Units for HART and Modbus Transmitters in Linear Mode Transmitters in Square Root Mode	gal/s, gal/m, gal/h, gal/d, Mgal/d, ft3/s, ft3/m, ft3/h, ft3/d, lgal/s, lgal/m, lgal/h, lgal/d, l/s, l/m, l/h, Ml/d, m3/s, m3/m, m3/h, m3/d, Nl/h, Nm3/h, Sm3/h, Am3/h, Sft3/m, MSCFD, MMSCFD, bbl/s, bbl/m, bbl/h, bbl/d, g/s, g/m, g/h, kg/s, kg/m, kg/h, kg/d, lb/s, lb/m, lb/h, lb/d, t/m, t/h, t/d, STon/m, STon/h, STon/d, LTon/h, LTon/d, %flow
Pressure Units for Low Power (-V) Transmitters in Linear Mode	inH2O, inHg, ftH2O, mmH2O, mmHg, psi, bar, mbar, g/cm2, kg/cm2, Pa, kPa, MPa, torr, atm
Flow Units for Low Power (-V) Transmitters in Square Root Mode	Any custom unit, up to seven characters long

Optional External Zero Adjustment

An optional external zero pushbutton (see Digital Liquid Crystal Display (LCD), page 12) is isolated from the electronics compartment and magnetically activates an internal switch through the housing. This helps eliminate a potential leak path for moisture or contaminants to get into the electronics compartment. This zero adjustment can be disabled by a configuration selection.

NOTE: Low Power transmitters do not have an External Zero Adjustment pushbutton.

44. For AP transmitters, 'a' is typically added to the EGU name on the display (for example, psia or mmHga). However, if the EGU name is six characters long, the 'a' is not added.

Performance Specifications

Accuracy (Includes Linearity, Hysteresis, and Repeatability)

HART (-T) and Modbus (-M) Transmitters

Accuracy specifications are described below for Value Performance Transmitters using HART (-T) and Modbus (-M) communication, with zero-based calibrations, and under reference operating conditions unless otherwise specified.

URL = Upper Range Limit

Table 24 - IGP05S Direct Connect Accuracy – HART (-T) and Modbus (-M) Transmitters with Linear Output⁴⁵

Span Code	Reference Accuracy (% of Span)
C	±0.075% of span For turndowns greater than 10:1, accuracy = ±[0.00755 (URL/Span)]%
D	±0.075% of span For turndowns greater than 10:1, accuracy = ±[0.0075 (URL/Span)]%
E	
F	±0.075% of span For turndowns greater than 5:1, accuracy = ±[0.0015 (URL/Span)]%
J	±0.075% of span For turndowns greater than 3:1, accuracy = ±[0.025 (URL/Span)]%
H	±0.200% of span Turndown Limits of 3:1

Table 25 - IGP05S Biplanar Accuracy – HART (-T) and Modbus (-M) Transmitters with Linear Output⁴⁵

Span Code	Reference Accuracy (% of Span)
A	±0.075% of span For turndowns greater than 3:1, accuracy = ±[0.025 (URL/Span)]%
B	±0.075% of span For turndowns greater than 5:1, accuracy = ±[0.015 (URL/Span)]%
C	
D	±0.075% of span For turndowns greater than 10:1, accuracy = ±[0.0075 (URL/Span)]%

E	

Stability

Long term drift for Value Performance pressure transmitters is < ±0.05% of URL/yr for 5 years.

Turndown Capabilities

The turndown capability of a pressure transmitter, also known as the “turndown ratio”, “rangeability”, or simply “turndown”, is the ratio between the highest and lowest span settings for a transmitter:

$$\text{Turndown} = \frac{\text{Maximum Span}}{\text{Minimum Span}}$$

Our pressure transmitters have high turndown capabilities of up to 400:1.

Supply Voltage Effect

The output changes less than 0.005% of span for each 1 V change within the specified supply voltage requirements.

Position Effect

You can mount the transmitter in any position. Any zero effect caused by the mounting position can be removed by rezeroing. There is no span effect.

Ambient Temperature Effect

For direct connect AP/GP transmitters:

- With Span Code C, D, E, or F, the total effect for a 28°C (50°F) change within normal operating conditions is $\pm(0.03\% \text{ URL} + 0.06\% \text{ Span})$.
- With Span Code H or J, the total effect for a 28°C (50°F) change within normal operating conditions is $\pm(0.08\% \text{ URL} + 0.025\% \text{ Span})$.

For biplanar AP/GP transmitters:

- With Span Code A, the total effect for a 28°C (50°F) change within normal operating conditions is $\pm(0.18\% \text{ URL} + 0.025\% \text{ Span})$.
- With Span Code B, C, or D, the total effect for a 28°C (50°F) change within normal operating conditions is $\pm(0.04\% \text{ URL} + 0.050\% \text{ Span})$.
- With Span Code E or F, the total effect for a 28°C (50°F) change within normal operating conditions is $\pm(0.08\% \text{ URL} + 0.025\% \text{ Span})$.

For DP transmitters:

- With Span Code A, the total effect for a 28°C (50°F) change within normal operating conditions is $\pm(0.18\% \text{ URL} + 0.025\% \text{ Span})$.
- With all Span Codes, the total effect for a 28°C (50°F) change within normal operating conditions is $\pm(0.04\% \text{ URL} + 0.050\% \text{ Span})$.

NOTE: For -V electronics, add an additional 0.025% of span.

Vibration Effect

With aluminum housing, per IEC 61298-3, Section 7, Table 2 for “field with high vibration level or pipeline with high vibration level”: 0.42 mm peak to peak displacement from 10 to 60 Hz, 3 “g” constant acceleration input over a frequency range of 60 to 1000 Hz. Total effect is less than 0.1% of URL/sensor range per “g”.

With stainless steel housing, per IEC 61298-3, Section 7, Table 2 for “field with general application or pipeline with low vibration level”: 0.30 mm peak to peak displacement from 10 to 60 Hz, 2 “g” constant acceleration input over a frequency range of 60 to 1000 Hz. Total effect is less than 0.1% of URL/sensor range per “g”.

RFI Effect

For AP and GP transmitters, the output error is less than 0.1% of calibrated span for radio frequencies in the range of 30 to 1000 MHz and field intensity of 30 V/m when the transmitter is properly installed with shielded conduit and grounding, and housing covers are in place (per IEC Std. 61000-4-3).

For DP transmitters, the output error is less than 0.1% of span within standard accuracy turndown limits, for radio frequencies from 27 to 1000 MHz and field intensity of 30 V/m when the transmitter is properly installed with shielded conduit and grounding, and housing covers are in place (per IEC Std. 61000-4-3).

Switching and Indirect Lightning Transients

The transmitter can withstand a transient surge up to 2000 V (common mode) or 1000 V (normal mode) without permanent damage. The output shift is less than 1.0%. (Per ANSI/IEEE C62.41-1980 and IEC Std. 61000-4-5.)

Re-zero Calibration Frequency

The re-zero calibration frequency is five years. The five years is derived using the values of allowable error (% span), TPE (% span), performance margin (% span), and stability (% span/month); where:

$$\text{Calibration Frequency} = \frac{\text{Performance Margin}}{\text{Stability}} = \text{Months}$$

Static Pressure Effect for DP Transmitters

The zero and span shift for a 1,000 psi (7 MPa) change in static pressure is described below.

Zero Shift

Zero shift can be calibrated out by zeroing at nominal line pressure.

Span Code	Zero Shift Static Pressure Effect ⁴⁷
A	±0.03% of URL
B	±0.07% of URL
C	±0.02% of URL
D and E	±0.50% URL ⁴⁸

Span Shift

Span Shift is ±0.15% of reading.

47. This table is for digital accuracy; add 0.01% span for analog accuracy (HART only).

48. Per 3.5 MPa (500 psi) for Span Code D

Communication

HART Communication Protocol

Transmitters using HART communication transmit a 4 to 20 mA output signal with a superimposed HART digital signal for remote configuration and monitoring. This allows direct analog connection to common receivers while still providing digital communications using a HART communicator, PC-based configurator, or the local display.

Transmitter communication is configurable for either analog or multidrop (fixed current) mode. Digital communication is provided in both modes based upon the FSK (Frequency Shift Keying) technique which alternately superimposes one of two different frequencies on the uninterrupted current carried by the two signal/power wires. See HART Communication Configured for Analog Mode (4 to 20 mA Output), page 39 and Multidrop (Fixed Current) Communication, page 40.

HART Communication Configured for Analog Mode (4 to 20 mA Output)

Measurements and diagnostics are available from the HART communicator connected to the two-wire loop carrying the 4 to 20 mA measurement signal by using a bidirectional digital signal superimposed on the 4 to 20 mA current signal.

Multiple measurements are transmitted digitally, including not only the pressure measurement but also the electronics temperature and sensor temperature, which can be used to monitor external heat tracing equipment. For AP and GP transmitters, the primary measurement is expressed in pressure units, and for DP transmitters, the primary measurement can be expressed in either pressure or flow units. Transmitter diagnostics are also communicated.

The 4 to 20 mA output signal is updated multiple times per second. Digital communications between the transmitter and HART communicator or PC-based configurator is rated for distances up to 3,050 m (10,000 ft). The communications rate is 1200 baud and requires a minimum loop load of 250 ohms.

Configuration and reranging can be accomplished with a HART communicator, PC-based configurator, or the pushbuttons on the optional local display.

Figure 20 - 4 to 20 mA Output Functional Block Diagram, Point-to-Point Communications

Multidrop (Fixed Current) Communication

Multidrop communication is the connection of several transmitters to a single communications line. Communication between the host computer and transmitters takes place digitally with the analog output of the transmitter fixed.

This mode supports communication with up to 64 transmitters on a single pair of signal/power wires. The output signal is updated 4 times per second and carries not only the pressure measurement, but also the sensor and electronics temperatures. Communication between the transmitter and system, or between the transmitter and communicator or configurator, is rated for distances up to 1525 m (5000 ft). The communications rate is 1200 baud and requires a minimum loop load of 250 ohms.

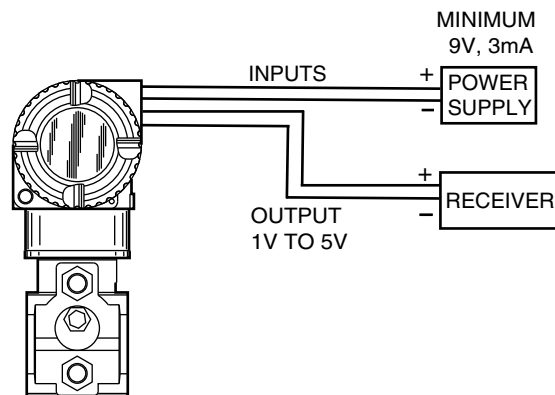

Figure 21 - Typical Multidrop Functional Block Diagram

Low Power

There is no communication on a Low Power (-V) transmitter. It is a simple device that outputs a voltage between 1V and 5V depending on the pressure applied. Low Power Block Diagram, page 40 shows how to connect a Low Power transmitter.

Figure 22 - Low Power Block Diagram

Modbus Communication

This transmitter combines proven multivariable sensing technology with the advanced development of the Modbus protocol. Communication with a host processor is made using the Modbus RTU (Remote Terminal Unit) mode over a 2-wire RS-485 multidrop serial connection.

The transmitter functions as a server device. Server (station) addresses are in the range of 1 to 247.

Table 34 - Modbus Communication Parameters

Parameter	Values
Serial Connection	RS-485
Serial Protocol	Modbus RTU Server
Supported Baud Rate	1200, 4800, 9600, and 19200
Modbus Address	Supports Standard (1-254) and Extended (1-65534). (Default=99)
Parity	User selectable (Default=No Parity)
Word Length	8 bits
Stop Bit	User selectable (Default=2 bits)

Operating Conditions

Description	Reference Operating Conditions	Normal Operating Conditions ⁴⁹	Operative Limits ⁴⁹
Sensor Body Temperature ⁵⁰			
Silicone	24 ± 2°C (75 ± 3°F)	-29 to +82°C (-20 to +180°F) ⁵¹	-46 and +121°C (-50 and +250°F) ^{52 53}
Fluorinert	24 ± 2°C (75 ± 3°F)	-29 to +82°C (-20 to +180°F) ⁵⁴	-29 and +121°C (-20 and +250°F) ⁵⁴
NEOBEE®	24 ± 2°C (75 ± 3°F)	-18 to +82°C (0 to +180°F)	-18 and +121°C (0 and 250°F)
Electronics Temperature			
Without display	24 ± 2°C (75 ± 3°F)	-29 to +82°C (-20 to +180°F) ⁵⁵	-40 and +85°C (-40 and +185°F) ^{56 57}
With display	24 ± 2°C (75 ± 3°F) ⁵⁸	-20 to +82°C (-4 to +180°F) ^{59 60 58}	-40 and +85°C (-40 and +185°F) ^{56 57 61 58}
Relative Humidity	50 ± 10% ⁶²	0 to 100% ⁶²	0 and 100% ⁶²
Ambient Pressure (DP HART)	860 to 1060 mbar	Atmospheric	Atmospheric
Supply Voltage, dc (HART) ⁶³	30 ± 0.5 V dc	15.5 to 42 V dc	12.5 V dc and 42 V dc
Supply Voltage, dc (Low Power)	15.5 ± 0.5 V dc	9 to 15.5 V dc	9 V dc and 30 V dc
Output Load (HART)	650 Ω	0 to 1,450 Ω ⁶⁴	0 and 1,450 Ω ⁶⁴
Output Load (Low Power)	10 MΩ	1 to 10 MΩ	1 and Open Circuit
Mounting Position			
AP and GP	Upright	Upright	No limit
DP	Upright or Horizontal ⁶⁵	Upright or Horizontal ⁶⁵	
Vibration			
Aluminum Housing	1 m/s ² (0.1 “g”)	Per IEC 60770 for “field with high vibration level or pipeline with high vibration level”: 0.42 mm peak-to-peak displacement from 10 to 60 Hz, 3 “g” constant acceleration input over a frequency range of 60 to 1000 Hz	
SS Housing	1 m/s ² (0.1 “g”)	Per IEC 60770 for “field with general application or pipeline with low vibration level”: 0.3 mm peak-to-peak displacement from 10 to 60 Hz, 2 “g” constant acceleration input over a frequency range of 60 to 1000 Hz	

49. Normal Operating Conditions and Operative Limits are defined per ANSI/ISA 51.1-1979 (R1993).

50. When Traditional Structure Codes 78/79 (PVDF inserts in Hi- and Lo-side process covers) are used, temperature limits are -7 and +82°C (+20 and 180°F).

51. -29 to +50°C (-20 to +122°F) for biplanar AP transmitters

52. Selection of Option -J extends the low temperature operative limit of transmitters with silicone filled sensors down to -50°C (-58°F).

Performance is not assured below -29°C. Sensor damage may occur if process is frozen. Contact Global Customer Support for availability of this option.

53. -46 and +50°C (-50 and +122°F) for biplanar AP transmitters.

54. -18°C (0°F) for J range (IGP05S transmitters only).

55. -29 to +50°C (-20 to +122°F) for biplanar AP transmitters.

56. -40 and +75°C (-40 and +167°F) for transmitters with ATEX flameproof classification.

57. -40 and +50°C (-40 and +122°F) for biplanar AP transmitters.

58. Although the LCD will not be damaged by any temperature within the storage and transportation limits, updates will be slowed and readability decreased at temperatures outside the normal operating conditions.

59. -20 to +50°C (-20 to +122°F) for biplanar AP transmitters.

60. Refer to Electrical Certifications, page 44 for a restriction in ambient temperature limits with certain electrical approvals/certifications.

61. Display updates are slowed and readability is decreased at temperatures less than -20°C (-4°F).

62. Relative humidity refers to transmitters with housing covers installed and conduit entrances sealed. To maintain IEC IP66/IP67 and NEMA Type 4X protection, plug the unused conduit opening with the metal plug provided. Use a suitable thread sealant on both conduit connections. In addition, the threaded housing covers must be installed. Turn covers to seat the o-ring into the housing, then continue to hand-tighten until the cover contacts the housing metal-to-metal.

63. Refer to Supply Voltage, page 29.

64. 250 Ω minimum load is required for communication with a HART communicator.

65. Sensor process wetted diaphragms in a vertical plane.

Storage and Transportation Conditions

Description	Storage and Transportation Limits
Sensor Body Temperature	-29 to +82°C (-20 to +180°F) ⁶⁶
Electronics Temperature	-20 to +82°C (-4 to +180°F) ^{67 68 66}
Relative Humidity	0 to 100% Noncondensing ⁶⁹
Ambient Pressure (DP HART)	Atmospheric

66. -29 to +50°C (-20 to +122°F) for biplanar AP transmitters.

67. -20 to +50°C (-4 to +122°F) for biplanar AP transmitters.

68. Refer to [Electrical Certifications](#), page 44 for a restriction in ambient temperature limits with certain electrical approvals/certifications.

69. Relative humidity refers to transmitters with housing covers installed and conduit entrances sealed. To maintain IEC IP66/IP67 and NEMA Type 4X protection, plug the unused conduit opening with the metal plug provided. Use a suitable thread sealant on both conduit connections. In addition, the threaded housing covers must be installed. Turn covers to seat the o-ring into the housing, then continue to hand-tighten until the cover contacts the housing metal-to-metal.

Electrical Certifications

These transmitters have been designed to meet the electrical safety descriptions listed in the following table. For detailed information or status of testing laboratory approvals/certifications, contact Global Customer Support.

Refer to *Model Codes*, page 46 for the availability of electrical safety design codes with specific transmitter structures.

DANGER

When selecting an Electrical Safety Design Code that ends in “M” or “P,” you must permanently mark (check off in the rectangular block on the data plate) one type of protection only. Do not change this mark once it has been applied.

Failure to follow these instructions will result in death or serious injury.

Table 35 - Electrical Certifications

Agency Certification, Types of Protection, and Area Classification	Application Conditions ⁷⁰	Model Code Option
ATEX intrinsically safe, Ex ia IIC ⁷¹	Temperature Class T4, Ta = -40°C to +80°C	AA
ATEX flameproof, Ex d IIC	Temperature Class T6, T85°C, Ta = -40°C to +75°C	AD
ATEX multiple certifications (includes ATEX Codes AA and AN) ⁷¹	Applies to Codes AA and AN	AM
ATEX protection type n, Ex ic IIC, or Ex nA ⁷¹	Temperature Class T4, Ta = -40°C to +80°C	AN
ATEX multiple certifications (includes ATEX Codes AA, AD and AN) ⁷¹	Applies to Codes AA, AN, and AD	AP
INMETRO intrinsically safe, Ex ia IIC ⁷¹	Temperature Class T4, Ta = -40°C to +80°C	BA
INMETRO flameproof, Ex d IIC	Temperature Class T6, T85°C, Ta = -40°C to +75°C	BD
INMETRO multiple certifications (includes INMETRO Codes BA and BD) ⁷¹	Applies to codes BA and BD	BP
CSA intrinsically safe, Zone certified Ex ia ⁷¹	Temperature Class T4A at 40°C and T3C at 85°C maximum ambient	CA
CSA zone certified flameproof Ex d IIC; also explosion proof, dust ignition-proof	T6, Maximum Ambient Temperature 75°C	CD
CSA multiple certifications (includes CSA Codes CA and CN) ⁷¹	Applies to codes CA and CN	CM
CSA non-incendive, Zone certified Ex nA IIC ⁷¹	Temperature Class T4A at 40°C and T3C at 85°C maximum ambient	CN
CSA multiple certifications (includes CSA Codes CA, CD and CN) ⁷¹	Applies to codes CA, CD, and CN	CP
Multi-marked ATEX and IECEx intrinsically safe, Ex ia IIC ⁷¹	Temperature Class T4, Ta = -40°C to +80°C	DA
Multi-marked ATEX and IECEx flameproof, Ex d IIC	Temperature Class T6, T85°C, Ta = -40°C to +75°C	DD
Multi-marked ATEX and IECEx protection type n, Ex ic IIC ⁷¹	Temperature Class T4, Ta = -40°C to +80°C	DN
IECEx intrinsically safe, Ex ia IIC ⁷¹	Temperature Class T4, Ta = -40°C to +80°C	EA
IECEx flameproof, Ex d IIC	Temperature Class T6, T85°C, Ta = -40°C to +75°C	ED
IECEx multiple certifications, ia, ic, nA ⁷¹	Applies to Codes EA and EN	EM
IECEx protection type n, Ex ic IIC, or Ex nA ⁷¹	Temperature Class T4, Ta = -40°C to +80°C	EN
IECEx multiple certifications, ia, ic, nA, and d ⁷¹	Applies to Codes EA, EN, and ED	EP

70. Selection of Option -J extends the low temperature operative limit of transmitters with silicone filled sensors down to -50°C (-58°F).

71. Not available with Electronics Version -M.

Structure — Direct Connect Flameproof, Prepared for Diaphragm Seals — Diaphragm Seals Not Provided⁸³	
SH	316L ss Process Sensor and Diaphragm; Silicone Fill; Prepared for Remote Mount Seal
SJ	316L ss Process Sensor and Diaphragm; Inert Fill; Prepared for Remote Mount Seal

78. Not available with option codes -V1, -V2, -V3, and -V4.

79. Not available with Electrical Certification codes that end in D or P.

80. Not available with Electronics Version -M.

81. Specify direct connect seal DS-F, DS-G, DS-H, DS-K, DS-L, DS-M, or DS-N.

82. Specify remote mount seal DS-C, DS-F, DS-G, DS-H, DS-J, DS-K, DS-L, DS-M, or DS-N.

83. These structures are prepared for attachment of diaphragm seals by others. Do not specify a seal model code.

PC	316L ss Process Sensor; 316L ss Diaphragm; Silicone Fill; Sleeve Type 1.5" (nominal)
PD	316L ss Process Sensor; 316L ss Diaphragm; Silicone Fill; Threaded Type 1.5" (nominal)
PE	316L ss Process Sensor; C276 Diaphragm; Silicone Fill; Sleeve Type 1" (nominal)
PF	316L ss Process Sensor; C276 Diaphragm; Silicone Fill; Threaded Type 1" (nominal)
PG	316L ss Process Sensor; C276 Diaphragm; Silicone Fill; Sleeve Type 1.5" (nominal)
PH	316L ss Process Sensor; C276 Diaphragm; Silicone Fill; Threaded Type 1.5" (nominal)
PJ	316L ss Process Sensor; C276 Diaphragm; Silicone Fill; Threaded Type 1.5" (fits Ametek spud)
Structure — Direct Connect, High Pressure (Gauge Pressure Only)	
28	13-8 Moly ss Process Sensor and Diaphragm; Autoclave F-250-C Connection ⁸⁷
Structure — Biplanar (Vented Low Side Process Cover and Diaphragm)	
B0	316 ss Cover; Co-Ni-Cr Diaphragm; Silicone Fill
B1	316 ss Cover; Co-Ni-Cr Diaphragm; Inert Fill
B2	316 ss Cover; 316L ss Diaphragm; Silicone Fill
B3	316 ss Cover; 316L ss Diaphragm; Inert Fill
BG	316 ss Cover; 316 ss Gold-Plated Diaphragm; Silicone Fill
B4	316 ss Cover; Monel Diaphragm; Silicone Fill
B5	316 ss Cover; Monel Diaphragm; Inert Fill
B6	316 ss Cover; C276 Diaphragm; Silicone Fill
B7	316 ss Cover; C276 Diaphragm; Inert Fill
N4	Monel Cover; Monel Diaphragm; Silicone Fill
N5	Monel Cover; Monel Diaphragm; Inert Fill
C6	C276 Cover; C276 Diaphragm; Silicone Fill
C7	C276 Cover; C276 Diaphragm; Inert Fill

84. Not available with Electrical Certification codes that end in D or P.

85. Available with Span Limit codes C and D for -V and -T electronics.

86. Not available with Electronics Version -M.

87. Available with Span Limit code H only.

Table 36 - Absolute and Gauge Pressure Transmitters (Continued)

Code	Description
C8	C276 Cover; Tantalum Diaphragm; Silicone Fill
C9	C276 Cover; Tantalum Diaphragm; Inert Fill
78	PVDF Insert; Tantalum Diaphragm; Silicone Fill ⁸⁸
79	PVDF Insert; Tantalum Diaphragm; Inert Fill ⁸⁸
Structure — LP1 Biplanar (Not Available with Diaphragm Seals)	
LL	316 ss Cover; 316L ss Diaphragm; Silicone Fill
LM	316 ss Cover; 316L ss Diaphragm; Inert Fill
LC	316 ss Cover; C276 Diaphragm; Silicone Fill
LD	316 ss Cover; C276 Diaphragm; Inert Fill
CC	C276 Cover; C276 Diaphragm; Silicone Fill
CD	C276 Cover; C276 Diaphragm; Inert Fill
Structure — LP2 Biplanar (Not Available with Diaphragm Seals)	
L2	316 ss Cover; 316L ss Process Sensor and Diaphragm; Silicone Fill
L3	316 ss Cover; 316L ss Process Sensor and Diaphragm; Inert Fill
L6	316 ss Cover; 316L ss Process Sensor; C276 Diaphragm; Silicone Fill
L7	316 ss Cover; 316L ss Process Sensor; C276 Diaphragm; Inert Fill
Structure — Biplanar, Prepared for Diaphragm Seals — Diaphragm Seals Provided^{89 90 91}	
P1	316 ss Cover; 316L ss Process Sensor and Diaphragm; Silicone Fill; Prepared for Direct Connect Seal ⁹²
P2	316 ss Cover; 316L ss Process Sensor and Diaphragm; Inert Fill; Prepared for Direct Connect Seal ⁹²
P3	316 ss Cover; 316L ss Process Sensor and Diaphragm; Silicone Fill; Prepared for Remote Mount Seal ⁹³
P4	316 ss Cover; 316L ss Process Sensor and Diaphragm; Inert Fill; Prepared for Remote Mount Seal ⁹³
Structure — Biplanar, Prepared for Diaphragm Seals — Diaphragm Seals Not Provided^{89 90 91 94}	
P5	316 ss Cover; 316L ss Process Sensor and Diaphragm; Silicone Fill; Prepared for Remote Mount Seal
P6	316 ss Cover; 316L ss Process Sensor and Diaphragm; Inert Fill; Prepared for Remote Mount Seal

88. Maximum pressure rating is 2.1 MPa (300 psi); temperature limits are derated to -7 and +82°C (+20 and +180°F).

89. Not available with optional Biplanar Process Connector (codes -F1 through -F6).

90. Not available with options -X1, -X2, or -X3.

91. Span Limit code A not available for biplanar structures P1, P2, P3, P4, P5, and P6.

92. Specify direct connect seal DS-C, DS-F, DS-G, DS-H, DS-K, DS-L, DS-M, DS-N, or DS-P.

93. Specify remote mount seal DS-C, DS-F, DS-G, DS-H, DS-J, DS-K, DS-L, DS-M, or DS-N.

94. These structures are prepared for attachment of diaphragm seals by others. Do not specify a seal model code.

Table 36 - Absolute and Gauge Pressure Transmitters (Continued)

Code	Description
Span Limits	
Transmitters with Direct Connect Structures	
C ⁹⁵	With -T Electronics: 6.9 and 207 kPa (1 and 30 psi) With -V Electronics: 6.9 and 207 kPa (1 and 30 psi)
D	With -T or -M Electronics: 3.4 and 1380 kPa (0.5 and 200 psi) With -V Electronics: 69 and 1380 kPa (10 and 200 psi)
E	With -T or -M Electronics: 0.034 and 13.8 MPa (5 and 2000 psi) With -V Electronics: 0.69 and 13.8 MPa (100 and 2000 psi)
F ⁹⁶	With -T or -M Electronics: 0.52 and 41.4 MPa (75 and 6000 psi) With -V Electronics: 13.8 and 41.4 MPa (2000 and 6000 psi)
H ⁹⁶	With -T or -M Electronics: 69 and 207 MPa (10000 and 30000 psi) ⁹⁷ With -V Electronics: 69 and 207 MPa (10000 and 30000 psi) ⁹⁷
J ⁹⁶	With -T or -M Electronics: 6.9 and 69 MPa (1000 and 10000 psi) ⁹⁸ With -V Electronics: 6.9 and 69 MPa (1000 and 10000 psi) ⁹⁸
Transmitters with Biplanar Structures	
A ⁹⁶	With -T or -M Electronics: 0.12 and 7.5 kPa (0.5 and 30 inH ₂ O) With -V Electronics: 0.12 and 7.5 kPa (0.5 and 30 inH ₂ O)
B	With -T or -M Electronics: 0.12 and 50 kPa (0.5 and 200 inH ₂ O) With -V Electronics: 0.87 and 50 kPa (3.5 and 200 inH ₂ O)
C	With -T or -M Electronics: 0.62 and 250 kPa (2.49 and 1000 inH ₂ O) With -V Electronics: 6.9 and 250 kPa (27.8 and 1000 inH ₂ O)
D	With -T or -M Electronics: 26 and 2070 kPa (3.75 and 300 psi) With -V Electronics: 69 and 2070 kPa (10 and 300 psi)
E	With -T or -M Electronics: 0.26 and 20.7 MPa (37.5 and 3000 psi) With -V Electronics: 0.69 and 20.7 MPa (100 and 3000 psi)
F ⁹⁶	With -T or -M Electronics: 1.1 and 34.5 MPa (165 and 5000 psi) With -V Electronics: 1.38 and 34.5 MPa (200 and 5000 psi)
Conduit Connection and Housing Material	
1	1/2 NPT Conduit Connection, Both Sides, Aluminum Housing
3	1/2 NPT Conduit Connection, Both Sides, 316 ss Housing
5	M20 Conduit Connection, Both Sides, Aluminum Housing
6	M20 Conduit Connection, Both Sides, 316 ss Housing

95. Not available with Electronics Version -M.

96. Available for gauge pressure transmitters only.

97. Available with Structure code 28 only.

98. Available only with Direct Connect structures that have 1/2 NPT external diameter and either 316L ss or C276 diaphragm material.

Table 36 - Absolute and Gauge Pressure Transmitters (Continued)

Code	Description
Electrical Certifications	
AA	ATEX intrinsically safe, Ex ia IIC ^{99 100}
AD	ATEX flameproof, Ex d IIC ¹⁰¹
AM	ATEX multiple certifications (includes ATEX Codes AA and AN) ^{99 100}
AN	ATEX protection type n, Ex ic IIC, or Ex nA ^{99 100}
AP	ATEX multiple certifications (includes ATEX Codes AA, AD and AN) ^{99 101}
BA	INMETRO intrinsically safe, Ex ia IIC ^{99 100}
BD	INMETRO flameproof, Ex d IIC ¹⁰¹
BP	INMETRO multiple certifications (includes INMETRO Codes BA and BD) ^{99 101}
CA	CSA intrinsically safe, Zone certified Ex ia ⁹⁹
CD	CSA zone certified flameproof Ex d IIC; also explosion proof, dust ignition-proof ¹⁰¹
CM	CSA multiple certifications (includes CSA Codes CA and CN) ⁹⁹
CN	CSA non-incendive, Zone certified Ex nA IIC ⁹⁹
CP	CSA multiple certifications (includes CSA Codes CA, CD and CN) ^{99 101}
DA	Multi-marked ATEX and IECEx intrinsically safe, Ex ia IIC ^{99 100}
DD	Multi-marked ATEX and IECEx flameproof, Ex d IIC ¹⁰¹
DM	Multi-marked ATEX and IECEx multiple certifications, ia, ic ^{99 100}
DN	Multi-marked ATEX and IECEx protection type n, Ex ic IIC ^{99 100}
DP	Multi-marked ATEX and IECEx multiple certifications, ia, ic, and d ^{99 101}
EA	IECEx intrinsically safe, Ex ia IIC ^{99 100}
ED	IECEx flameproof, Ex d IIC ¹⁰¹
EM	IECEx multiple certifications, ia, ic, nA ^{99 100}
EN	IECEx protection type n, Ex ic IIC, or Ex nA ^{99 100}
EP	IECEx multiple certifications, ia, ic, nA, and d ^{99 101}
FA	FM Classes I, II and III Division 1 intrinsically safe, AEx ia IIC ⁹⁹
FD	FM Classes I, II and III Division 1 explosion proof, dust-ignition proof, Zone approved AEx d IIC ¹⁰¹
FM	FM multiple certifications (includes FM Codes FA or FN) ⁹⁹
FN	FM Classes I, II and III, Division 2 non-incendive, Zone approved AEx nA IIC ⁹⁹
FP	FM multiple certifications (includes FM Codes FA, FD or FN) ^{99 101}
KD	KC Certification Ex d ¹⁰¹
NA	NEPSI intrinsically safe ^{99 100}
ND	NEPSI flameproof, Ex d IIC ¹⁰¹

99. Not available with Electronics Version -M.

100. Not available with Structure codes TA, T2, T3, TB, T4, T5, M1, M6, M9.

101. Available with all biplanar structures and only the following Direct Connect Structure codes: 52, 53, 60, 61, 90, 91, 92, 93, F2, F3, F4, F5, D5, D6, S5, S6, SH, SJ, and 28.

Table 36 - Absolute and Gauge Pressure Transmitters (Continued)

Code	Description
RA	EAC intrinsically safe, Ex ia ¹⁰² 103
RD	EAC flameproof, Ex d ¹⁰⁴
RN	EAC protection type n, Ex ic IIC or Ex nA ¹⁰² 103
ZZ	No certification ¹⁰²
Optional Mounting Bracket Sets	
-M1	Painted Steel Bracket, Plated Steel Bolts, 1/2 NPT, Direct Connect Only ¹⁰⁵ 106 107
-M2	Stainless Steel Bracket, Stainless Steel Bolts, 1/2 NPT, Direct Connect Only ¹⁰⁵ 106 107
-M3	Universal Stainless Steel Mounting Bracket Set, Stainless Steel Hardware, Biplanar Only
-M5	Painted Steel Bracket, Plated Steel Bolts, M20, Direct Connect Only ¹⁰⁵ 106 108
-M6	Stainless Steel Bracket, Stainless Steel Bolts, M20, Direct Connect Only ¹⁰⁵ 106 108
-M7	Stainless Steel Bracket for Flameproof Direct Connect Sensor Structures ¹⁰⁹
-M8	Painted Steel Bracket for Flameproof Direct Connect Sensor Structures ¹⁰⁹
-M9	Painted Steel Bracket, Plated Steel Bolts, Biplanar Only
-M0	Stainless Steel Bracket, Stainless Steel Bolts, Biplanar Only
Optional Vent Screw and Block and Bleed Valve	
-V1	316 ss Vent Screw in Process Connection ¹⁰⁵ 110 111
-V2	Block and Bleed Valve, Carbon Steel ¹⁰⁵ 110 112
-V3	Block and Bleed Valve, 316 ss ¹⁰⁵ 110 112
-V4	Block and Bleed Valve, 316 ss w/ Monel Trim, NACE Approved ¹⁰⁵ 110 112
-V5	Vent Screw in Side of Process Cover ¹¹³ 114
-V6	Omit Vent Screw ¹¹⁵
Optional Biplanar Process Connector Type (same material as Process Cover)¹¹⁶	
-F1	1/4 NPT ¹¹⁷
-F2	1/2 NPT ¹¹⁸
-F3	RC 1/4 ¹¹⁷
-F4	RC 1/2 ¹¹⁸
-F6	1/2 Schedule 80 Weld Neck ¹¹⁷

102. Not available with Electronics Version -M.

103. Not available with Structure codes TA, T2, T3, TB, T4, T5, M1, M6, M9.

104. Available with all biplanar structures and only the following Direct Connect Structure codes: 52, 53, 60, 61, 90, 91, 92, 93, F2, F3, F4, F5, D5, D6, S5, S6, SH, SJ, and 28.

105. Not available with biplanar structures.

106. Not available with Electrical Certification codes that end in D or P.

107. Available with Conduit Connection and Housing Material codes 1 and 3 only.

108. Available with Conduit Connection and Housing Material codes 5 and 6 only.

109. Available only with flameproof Direct Connect Structure codes, excluding D5 and D6.

110. Not available with option -G.

111. Available only with 1/2 NPT 316L ss Structure codes 22, 23, 30, 31, 52, 5G, 53, 60, 6G, and 61..

112. Available only with structures that have 1/2 NPT external connections.

113. Available only with biplanar Structure codes B0, B1, B2, B3, BG, B4, B5, B6, B7, N4, N5, C6, C7, C8, C9.

114. Not available with optional IEC 61518 Construction codes -D1 through -D9.

115. Available only for transmitters with LP1 structures.

116. Process Connectors not available with Structure codes LL, LM, LC, or LD when Optional Mounting Bracket option -M3, -M9, or -M0 is selected.

117. Available with all biplanar structures that have 316L ss or Monel process covers.

118. Available with all biplanar structures except those with PVDF process covers.

Table 36 - Absolute and Gauge Pressure Transmitters (Continued)

Code	Description
Options for Digital Indicator with Pushbuttons	
-L1	Digital Display, Pushbuttons and Window Cover ¹¹⁹
-L2	Substitute Solid Cover over Digital Display ¹²⁰
Optional IEC 61518 Construction^{121 122}	
-D1	Single-Ended Process Cover with B7 Steel Bolt; No Connector Screw; MWP=2320 psi ¹²³
-D2	Double-Ended Process Cover ¹²⁴ with B7 Steel Bolt; Size M10 Steel Connector Screw; MWP=1500 psi ^{125 126 127}
-D3	Single-Ended Process Cover with B7 Steel Bolt; No Connector Screw; MWP=3626 psi ¹²³
-D4	Double-Ended Process Cover ¹²⁴ with B7 Steel Bolt; Size 7/16 Steel Connector Screw; MWP=1500 psi ^{125 126 127}
-D5	Single-Ended Process Cover with 316 ss Bolt; No Connector Screw; MWP=2175 psi ¹²³
-D6	Double-Ended Process Cover ¹²⁴ with 316 ss Bolt; Size 7/16 316 ss Connector Screw; MWP=1500 psi ^{125 126 127}
-D7	Single-Ended Process Cover with 17-4 PH Bolt; No Connector Screw; MWP=3626 psi ¹²³
-D8	Double-Ended Process Cover ¹²⁴ with 17-4 PH Bolt; Size 7/16 17-4 PH Connector Screw; MWP=1500 psi ^{125 126 127}
-D9	Single-Ended Process Cover with 17-4 PH Bolt; No Connector Screw; MWP=5800 psi ¹²³
Optional Cleaning and Preparation¹²⁸	
-X1	Unit Degreased – for Silicone Fill Sensors Only ¹²⁹
-X2	Cleaned and Prepared for Oxygen Service – for Inert Fill Sensors Only ^{130 131}
-X3	Cleaned and Prepared for Chlorine Service ^{130 132}
Optional Bolting (Process Covers and Process Connectors)^{121 133 134}	
-B1	316 ss Bolts and Nuts (high corrosion protection; MWP derated to 2175 psi) ¹³⁵
-B2	17-4 PH ss Bolts and Nuts (bright acid tin coated corrosion protection with no pressure derating)
-B3	B7M Bolts and 2HM Nuts (conforms to NACE MR0175/MR0103, Class II; MWP derated to 2900 psi) ¹³⁵
Optional Conduit Thread Adapters^{136 137 138}	
-A1	Hawke-Type 1/2 NPT Brass Cable Gland
-A3	M20 Connector

119. Not available with Electronics Version -V.

120. Available only with Electronics Version -V.

121. Span limit, maximum working pressure, maximum overrange pressure, and maximum static pressure (d/p) are derated for optional IEC 61518 Construction and optional Bolting except for codes -D3, -D7, and -B2. Option -D1 is derated to 2320 psi. Options -D5 and -B1 are derated to 2175 psi. Options -D2, -D4, -D6, and -D8 are derated to 1500 psi. Option -B3 is derated to 2900 psi.

122. Not available with optional Biplanar Process Connector (codes -F1 through -F6).

123. Available with Biplanar Structure codes B2, B3, B6, B7, LL, LM, LC, and LD.

124. Blind connector supplied.

125. Temperature limits are derated to -10 and +80°C (14 and 176°F) for optional IEC 61518 Construction codes -D2, -D4, -D6, and -D8 only.

126. Available only with Structure codes B2, B3, B6, and B7.

127. Not available with optional Mounting Bracket Sets -M3, -M9, and -M0.

128. Not available with Span code H.

129. Available only with structures that have silicone fill and are not prepared for seals.

130. Available only with structures that have inert fill and are not prepared for seals.

131. After units are cleaned and reassembled for oxygen service, they are not rechecked for accuracy. This may affect performance for DP and biplanar GP transmitters.

132. For -X3, standard bolting is replaced with 17-4 ph ss bolts and nuts. Therefore, Bolting codes -B1, -B2, and -B3 are not available with -X3.

133. Not available with optional IEC 61518 Construction codes -D1 through -D9.

134. Available with biplanar structures only.

135. See Maximum Static, Overrange, and Proof Pressure Ratings, page 27 for pressure deratings when certain IEC 61518 options and Bolting Options -B1 or -B3 are specified.

136. Not available with Electrical Certification codes that end in D or P.

137. Available with Conduit Connection and Housing Material codes 1 and 3 only.

138. Available only with -ZZ (no extra certification).

Table 36 - Absolute and Gauge Pressure Transmitters (Continued)

Code	Description
Optional Custom Factory Configuration	
-C2	Custom Factory Configuration (requires Configuration Form to be filled out)
Optional Electronics Housing Features	
-Z1	External Zero Adjustment ^{139 140}
-Z2	Custody Transfer Lock and Seal ¹⁴¹
-Z3	External Zero Adjustment and Custody Transfer Lock/Seal ^{139 140 141}
Optional Ermeto Connectors	
-E3	316 ss for Connecting 6 mm Tubing to 1/4 NPT Process Connector ¹⁴²
-E4	316 ss for Connecting 12 mm Tubing to 1/2 NPT Process Connector ¹⁴³
Optional Manifold Configurations	
-H1	Manifold Mounted to Transmitter and Pressure Tested (1.5 times transmitter range or 1.5 times manifold rating, whichever is less)
-H2	Manifold Mounted to Transmitter and Pressure Tested (Certificate)
Optional SIL 2 Selections¹⁴⁴	
-S1	Yellow Cover for SIL 2 on Electronics/Indicator Side of Housing ¹⁴⁵
-S2	Red Cover for SIL 2 on Electronics/Indicator Side of Housing ¹⁴⁵
Miscellaneous Optional Selections	
-F	Autoclave F-250-C (GP transmitters only) ¹⁴⁶
-G	G 1/2 B Manometer Process Connection ^{146 147}
-G1	Metal O-Ring for Diaphragm Seals in Vacuum Service ¹⁴⁸
-H	1/2 NPT External Thread (GP transmitters only) ¹⁴⁶
-J	Low Temperature Operative Limit -50°C (-58°F) ^{139 149 150}
-R	R 1/2 Process Connection (1/2 NPT to R 1/2 Adapter) ¹⁵¹
-S7	Ra 15 Sanitary Seal Finish ¹⁵²
-T	Supplemental Customer Tag (Stainless Steel Tag Wired onto Transmitter)

139. Not available with Electronics Version -V.

140. Not available for structures with sanitary or pulp and paper seals.

141. For flameproof models, the -Z2 and -Z3 options provide the seals in addition to the cover locks that are already included in the standard offering for these models.

142. Available only with Biplanar Structure codes B2, B3, B6, and B7, and Optional Biplanar Process Connector Type code -F1.

143. Available only with Biplanar Structure codes B2, B3, B6, and B7, and Optional Biplanar Process Connector Type code -F2.

144. Available only with Electronics Version -T.

145. Not available with Electronics Version -M.

146. DO NOT USE

147. Available with non-gold-plated 316L ss direct connect structures with 1/2 NPT external connections.

148. Available only with Structure codes P1, P2, P3, P4, P5, and P6.

149. Not available with Optional IEC 61518 Construction codes -D2, -D4, -D6, and -D8.

150. Not available with Direct Connect Structure codes 23, 31, 37, 39, E3, E5, 53, 61, 91, 93, F3, F5; Biplanar Structure codes B3, B7, LM, LD, L3, L7; and all Sanitary/Pulp and Paper structures.

151. Available with 316L ss direct connect structures with 1/2 NPT external connections.

152. Only available with Structure codes TA, T2, T3, TB, T4, T5, M1, M6, M9.

Differential Pressure Transmitters

Table 37 - Differential Pressure Transmitters

Code	Description
Model¹⁵³	
IDP05S	Differential Pressure Transmitter, Value Tier
Electronics Versions/Output Signals	
-T	HART and 4 to 20 mA with SIL 2
-M	Modbus RTU
-V	Low Power Electronics, 1 to 5 Volts
Structure Codes	
Structure — Traditional¹⁵⁴	
22	316 ss Cover; 316L ss Diaphragm; Silicone Fill; Max Static Pressure=25 MPa (3626 psi)
23	316 ss Cover; 316L ss Diaphragm; Inert Fill; Max Static Pressure=25 MPa (3626 psi)
26	316 ss Cover; C276 Diaphragm; Silicone Fill; Max Static Pressure=25 MPa (3626 psi)
27	316 ss Cover; C276 Diaphragm; Inert Fill; Max Static Pressure=25 MPa (3626 psi)
Structure — LP1 Direct Mount (Not Available with Diaphragm Seals); Maximum Static Pressure=25 MPa (3626 psi)¹⁵⁴	
LL	316 ss Cover; 316L ss Diaphragm; Silicone Fill
LM	316 ss Cover; 316L ss Diaphragm; Inert Fill
LC	316 ss Cover; C276 Diaphragm; Silicone Fill
LD	316 ss Cover; C276 Diaphragm; Inert Fill
Structure — LP2 Bracket Mount or Direct Mount (Not Available with Diaphragm Seals); Maximum Static Pressure=25 MPa (3626 psi)¹⁵⁴	
52	316 ss Cover; 316L ss Diaphragm; Silicone Fill
53	316 ss Cover; 316L ss Diaphragm; Inert Fill
56	316 ss Cover; C276 Diaphragm; Silicone Fill
57	316 ss Cover; C276 Diaphragm; Inert Fill
Structure — Prepared for Diaphragm Seals — Diaphragm Seals Provided (Static Pressure Rating Limited by Seal)^{155 156 157}	
S1	316 ss Cover; 316L ss Diaphragm; Silicone Fill; Remote Mount Seals, Both Sides
S2	316 ss Cover; 316L ss Diaphragm; Inert Fill; Remote Mount Seals, Both Sides
S3	316 ss, 1/2 NPT Cover; 316L ss Diaphragm; Silicone Fill; Remote Mount Seal, High Side
S4	316 ss, 1/2 NPT Cover; 316L ss Diaphragm; Inert Fill; Remote Mount Seal, High Side
S5	316 ss, 1/2 NPT Cover; 316L ss Diaphragm; Silicone Fill; Remote Mount Seal, Low Side
S6	316 ss, 1/2 NPT Cover; 316L ss Diaphragm; Inert Fill; Remote Mount Seal, Low Side
F1	316 ss, 1/2 NPT Cover; 316L ss Diaphragm; Silicone Fill; Direct Connect Seal, High Side
F2	316 ss, 1/2 NPT Cover; 316L ss Diaphragm; Inert Fill; Direct Connect Seal, High Side
F3	316 ss Cover; 316L ss Diaphragm; Silicone Fill; Direct Connect Seal, High Side and Remote Mount Seal, Low Side
F4	316 ss Cover; 316L ss Diaphragm; Inert Fill; Direct Connect Seal, High Side and Remote Mount Seal, Low Side

153. Refer to Accuracy (Includes Linearity, Hysteresis, and Repeatability), page 34 for accuracy specifications.

154. Maximum static pressure can be derated by optional selections.

155. Not available with options -X1, -X2, or -X3.

156. Both transmitter and diaphragm seal model numbers are required. See PSS 2A-1Z11 B for diaphragm seal model codes.

157. Available only with Process Connector Type code 0.

Table 37 - Differential Pressure Transmitters (Continued)

Code	Description
Structure — Prepared for Diaphragm Seals — Diaphragm Seals Not Provided (Static Pressure Rating Limited by Seal)^{158 159}	
SA	316 ss Cover; 316L ss Diaphragm; Silicone Fill; Remote Mount Seals, Both Sides
SB	316 ss Cover; 316L ss Diaphragm; Inert Fill; Remote Mount Seals, Both Sides
SC	316 ss, 1/2 NPT Cover; 316L ss Diaphragm; Silicone Fill; Remote Mount Seal, High Side
SD	316 ss, 1/2 NPT Cover; 316L ss Diaphragm; Inert Fill; Remote Mount Seal, High Side
SE	316 ss, 1/2 NPT Cover; 316L ss Diaphragm; Silicone Fill; Remote Mount Seal, Low Side
SF	316 ss, 1/2 NPT Cover; 316L ss Diaphragm; Inert Fill; Remote Mount Seal, Low Side
Span Limits	
A ¹⁶⁰	With -T or -M Electronics: 0.12 and 7.5 kPa; 0.5 and 30 inH ₂ O; 1.2 and 75 mbar With -V Electronics: 0.12 and 7.5 kPa; 0.5 and 30 inH ₂ O; 1.2 and 75 mbar
B	With -T or -M Electronics: 0.12 and 50 kPa; 0.5 and 200 inH ₂ O; 1.2 and 500 mbar With -V Electronics: 0.87 and 50 kPa; 3.5 and 200 inH ₂ O; 8.7 and 500 mbar
C	With -T or -M Electronics: 0.62 and 250 kPa; 2.5 and 1000 inH ₂ O; 6.22 and 2500 mbar With -V Electronics: 7 and 250 kPa; 28 and 1000 inH ₂ O; 70 and 2500 mbar
D	With -T or -M Electronics: 0.026 and 2.07 MPa; 3.75 and 300 psi; 0.26 and 20.7 bar With -V Electronics: 0.069 and 2.07 MPa; 10 and 300 psi; 0.69 and 20.7 bar
E	With -T or -M Electronics: 0.26 and 20.7 MPa; 37.5 and 3000 psi; 2.6 and 207 bar With -V Electronics: 0.69 and 20.7 MPa; 100 and 3000 psi; 6.9 and 207 bar
Process Connector Type (Same Material as the Process Cover)	
0	None
1	1/4 NPT ^{161 162}
2	1/2 NPT ¹⁶¹
3	RC 1/4 ^{161 162}
4	RC 1/2 ¹⁶¹
6	1/2 Schedule 80 Weld Neck ^{161 162}
Conduit Connection and Housing Material	
1	1/2 NPT Conduit Connection, Both Sides, Aluminum Housing
3	1/2 NPT Conduit Connection, Both Sides, 316 ss Housing
5	M20 Conduit Connection, Both Sides, Aluminum Housing
6	M20 Conduit Connection, Both Sides, 316 ss Housing

158. Not available with options -X1, -X2, or -X3.

159. Available only with Process Connector Type code 0.

160. Span limit code A is not available with diaphragm seals, except for sanitary spud seal model DS-P4.

161. Not available with structures that have seals on both sides.

162. Not available with structures that have C276 process covers.

Table 37 - Differential Pressure Transmitters (Continued)

Code	Description
Electrical Certifications	
AA	ATEX intrinsically safe, Ex ia IIC ¹⁶³
AD	ATEX flameproof, Ex d IIC
AM	ATEX multiple certifications (includes ATEX Codes AA and AN) ¹⁶³
AN	ATEX protection type n, Ex ic IIC, or Ex nA ¹⁶³
AP	ATEX multiple certifications (includes ATEX Codes AA, AD and AN) ¹⁶³
BA	INMETRO intrinsically safe, Ex ia IIC ¹⁶³
BD	INMETRO flameproof, Ex d IIC
BP	INMETRO multiple certifications (includes INMETRO Codes BA and BD) ¹⁶³
CA	CSA intrinsically safe, Zone certified Ex ia ¹⁶³
CD	CSA zone certified flameproof Ex d IIC; also explosion proof, dust ignition-proof
CM	CSA multiple certifications (includes CSA Codes CA and CN) ¹⁶³
CN	CSA non-incendive, Zone certified Ex nA IIC ¹⁶³
CP	CSA multiple certifications (includes CSA Codes CA, CD and CN) ¹⁶³
DA	Multi-marked ATEX and IECEx intrinsically safe, Ex ia IIC ¹⁶³
DD	Multi-marked ATEX and IECEx flameproof, Ex d IIC
DN	Multi-marked ATEX and IECEx protection type n, Ex ic IIC ¹⁶³
EA	IECEx intrinsically safe, Ex ia IIC ¹⁶³
ED	IECEx flameproof, Ex d IIC
EM	IECEx multiple certifications, ia, ic, nA ¹⁶³
EN	IECEx protection type n, Ex ic IIC, or Ex nA ¹⁶³
EP	IECEx multiple certifications, ia, ic, nA, and d ¹⁶³
FA	FM Classes I, II and III Division 1 intrinsically safe, AEx ia IIC ¹⁶³
FD	FM Classes I, II and III Division 1 explosion proof, dust-ignition proof, Zone approved AEx d IIC
FM	FM multiple certifications (includes FM Codes FA or FN) ¹⁶³
FN	FM Classes I, II and III, Division 2 non-incendive, Zone approved AEx nA IIC ¹⁶³
FP	FM multiple certifications (includes FM Codes FA, FD or FN) ¹⁶³
KD	KC Certification Ex d
NA	NEPSI intrinsically safe ¹⁶³
ND	NEPSI flameproof, Ex d IIC
RA	EAC intrinsically safe, Ex ia ¹⁶³
RD	EAC flameproof, Ex d
RN	EAC protection type n, Ex ic IIC or Ex nA ¹⁶³
ZZ	No certification ¹⁶³

163. Not available with Electronics Version -M.

Table 37 - Differential Pressure Transmitters (Continued)

Code	Description
Optional Mounting Bracket Sets^{164 165}	
-M1	Standard Style Painted Steel Bracket with Plated Steel Bolts
-M2	Standard Style Stainless Steel Bracket with Stainless Steel Bolts
-M3	Universal Style Stainless Steel Bracket with Stainless Steel Bolts
Optional Adapter Plates^{166 167 168}	
-P1	Adapter Set for MC Coplanar Manifolds, B7 Bolts ¹⁶⁹
-P2	Adapter Set for MC Coplanar Manifolds, 316 ss Bolts ¹⁷⁰
-P3	Adapter Set for MC Coplanar Manifolds, 17-4 ss Bolts ¹⁷¹
-P4	Adapter Set for MC Coplanar Manifolds, B7M Bolts ¹⁷²
-P5	Adapter Set for MT3 Coplanar Manifolds, Traditional Flange, B7 Bolts ¹⁶⁹
-P6	Adapter Set for MT3 Coplanar Manifolds, Traditional Flange, 316 ss Bolts ¹⁷⁰
-P7	Adapter Set for MT3 Coplanar Manifolds, Traditional Flange, 17-4 ss Bolts ¹⁷¹
-P8	Adapter Set for MT3 Coplanar Manifolds, Traditional Flange, B7M Bolts ¹⁷²
Options for Digital Indicator with Pushbuttons	
-L1	Digital Display, Pushbuttons and Window Cover ¹⁷³
-L2	Substitute Solid Cover over Digital Display ¹⁷⁴
Optional IEC 61518 Construction^{167 175 176}	
-D1	Single-Ended Process Cover with B7 Steel Bolt; No Connector Screw; MWP=2320 psi
-D2	Double-Ended Process Cover ¹⁷⁷ with B7 Steel Bolt; Size M10 Steel Connector Screw; MWP=1500 psi ^{178 179}
-D3	Single-Ended Process Cover with B7 Steel Bolt; No Connector Screw; MWP=3626 psi
-D4	Double-Ended Process Cover ¹⁷⁷ with B7 Steel Bolt; Size 7/16 Steel Connector Screw; MWP=1500 psi ^{178 179}
-D5	Single-Ended Process Cover with 316 ss Bolt; No Connector Screw; MWP=2175 psi
-D6	Double-Ended Process Cover ¹⁷⁷ with 316 ss Bolt; Size 7/16 316 ss Connector Screw; MWP=1500 psi ^{178 179}
-D7	Single-Ended Process Cover with 17-4 PH Bolt; No Connector Screw; MWP=3626 psi
-D8	Double-Ended Process Cover ¹⁷⁷ with 17-4 PH Bolt; Size 7/16 17-4 PH Connector Screw; MWP=1500 psi ^{178 179}
-D9	Single-Ended Process Cover with 17-4 PH Bolt; No Connector Screw; MWP=5800 psi

164. Not available with Structure codes F1, F2, F3, and F4 (direct connect seal).

165. Requires Process Connection 0 for LP1 structures LL, LM, LC, LD, CC, and CD.

166. Not available with optional IEC 61518 Construction codes -D1 through -D9.

167. Available only with Process Connector Type code 0.

168. Only available with LP1 and LP2 structures that have 316 ss process covers.

169. Not available with Bolting Options -B1, -B2, or -B3.

170. Available only with option -B1.

171. Available only with option -B2.

172. Available only with option -B3.

173. Not available with Electronics Version -V.

174. Available only with Electronics Version -V.

175. See Maximum Static, Overrange, and Proof Pressure Ratings, page 27 for pressure deratings when certain IEC 61518 options and Bolting Options -B1 or -B3 are specified.

176. Available only with Structure codes 22 through 27. Not available with options -V and -V1.

177. Blind connector supplied.

178. Not available with Mounting Bracket Set options -M1, -M2, and -M3.

179. Temperature limits are derated to -10 and +80°C (14 and 176°F) for optional IEC 61518 Construction codes -D2, -D4, -D6, and -D8 only.

Table 37 - Differential Pressure Transmitters (Continued)

Code	Description
Optional Cleaning and Preparation	
-X1	Unit Degreased – for Silicone Fill Sensors Only ¹⁸⁰
-X2	Cleaned and Prepared for Oxygen Service – for Inert Fill Sensors Only ^{181 182}
-X3	Cleaned and Prepared for Chlorine Service ^{181 183}
Optional Bolting (Process Covers and Process Connectors)^{184 185}	
-B1	316 ss Bolts and Nuts (high corrosion protection; MWP derated to 2175 psi) ¹⁸⁶
-B2	17-4 PH ss Bolts and Nuts (bright acid tin coated corrosion protection with no pressure derating)
-B3	B7M Bolts and 2HM Nuts (conforms to NACE MR0175/MR0103, Class II; MWP derated to 2900 psi) ¹⁸⁶
Optional Conduit Thread Adapters^{187 188 189}	
-A1	Hawke-Type 1/2 NPT Brass Cable Gland
-A3	M20 Connector
Optional Custom Factory Configuration	
-C2	Custom Factory Configuration (requires Configuration Form to be filled out)
Optional Electronics Housing Features	
-Z1	External Zero Adjustment ¹⁹⁰
-Z2	Custody Transfer Lock and Seal ¹⁹¹
-Z3	External Zero Adjustment and Custody Transfer Lock/Seal ^{190 191}
Optional Ermeto Connectors	
-E3	316 ss for Connecting 6 mm Tubing to 1/4 NPT Process Connector ¹⁹²
-E4	316 ss for Connecting 12 mm Tubing to 1/2 NPT Process Connector ¹⁹³
Optional Manifold Configurations	
-H1	Manifold Mounted to Transmitter and Pressure Tested (1.5 times transmitter range or 1.5 times manifold rating, whichever is less)
-H2	Manifold Mounted to Transmitter and Pressure Tested (Certificate)
Optional SIL 2 Selections¹⁹⁴	
-S1	Yellow Cover for SIL 2 on Electronics/Indicator Side of Housing ¹⁹⁵
-S2	Red Cover for SIL 2 on Electronics/Indicator Side of Housing ¹⁹⁵

180. Available only with structures that have silicone fill and are not prepared for seals.

181. Available only with structures that have inert fill and are not prepared for seals.

182. After units are cleaned and reassembled for oxygen service, they are not rechecked for accuracy. This may affect performance for DP and biplanar GP transmitters.

183. For -X3, standard bolting is replaced with 17-4 ph ss bolts and nuts. Therefore, Bolting codes -B1, -B2, and -B3 are not available with -X3.

184. Not available with optional IEC 61518 Construction codes -D1 through -D9.

185. For stainless steel bolts with IEC 61518 construction, specify -D5 to -D9, as required, instead of -B1 or -B2.

186. See Maximum Static, Overrange, and Proof Pressure Ratings, page 27 for pressure deratings when certain IEC 61518 options and Bolting Options -B1 or -B3 are specified.

187. Not available with Electrical Certification codes that end in D or P.

188. Available with Conduit Connection and Housing Material codes 1 and 3 only.

189. Available only with -ZZ (no extra certification).

190. Not available with Electronics Version -V.

191. Cover locks are provided as standard with Electrical Certification codes that end in D or P (flameproof).

192. Available only with Structure codes 22, 23, 26, and 27, and Process Connector codes 0 and 1.

193. Available only with Structure codes 22, 23, 26, and 27, and Process Connector code 2.

194. Available only with Electronics Version -T.

195. Not available with Electronics Version -M.

Table 37 - Differential Pressure Transmitters (Continued)

Code	Description
Miscellaneous Optional Selections	
-G1	Metal O-Ring for Diaphragm Seals in Vacuum Service ^{196 197}
-J	Low Temperature Operative Limit -50°C (-58°F) ^{198 199 200}
-T	Supplemental Customer Tag (Stainless Steel Tag Wired onto Transmitter)
-V	Supply Vent Screw in Side of Each Process Cover ²⁰¹
-V1	Omit Vent Screw in Side of Each Process Cover ²⁰²
-Y	Static Pressure Rating to 40 MPa (5800 psi) and 17-4 ss Bolts and Nuts ^{203 204}

196. When the diaphragm seal is used in vacuum applications, -G1 is required. This selection substitutes a vacuum service metal gasket for the standard PTFE process cover gasket.

197. Available only with structure codes for diaphragm seals.

198. Not available with Electronics Version -V.

199. Not available with Optional IEC 61518 Construction codes -D2, -D4, -D6, and -D8.

200. Not available with structures that have inert fill fluid.

201. Available only with Traditional Structure codes.

202. Available only with LP1 Direct Mount structures with 316 ss process covers.

203. Not available with structures prepared for diaphragm seals.

204. Not available with Bolting Options -B1, -B2, or -B3.

Dimensions

For dimensional information specific to your sales order, contact your sales representative to order a Certified Dimensional Print (CDP).

All dimensions in diagrams are shown in millimeters over inches ($\frac{\text{mm}}{\text{in}}$).

NOTE: For dimensional information on diaphragm seals, see PSS 2A-1Z11 B.

Direct Connect AP and Direct Connect GP Transmitters

Figure 23 - Direct Connect AP/GP Transmitters

NOTES:

1. CONDUIT CONNECTION 1/2 NPT OR M20, BOTH SIDES: PLUG UNUSED CONNECTION WITH SUPPLIED METAL PLUG.
2. TOPWORKS ROTATABLE TO ANY POSITION WITHIN ONE TURN COUNTERCLOCKWISE OF FULLY TIGHTENED POSITION.
3. DO NOT USE THE 1/4 NPT INTERNAL THREAD TO DIRECTLY CONNECT THE TRANSMITTER.

Figure 24 - Direct Connect AP/GP Transmitters with Options -G, -V1, -V2, -V3, -V4, and -R

Figure 25 - Direct Connect AP/GP Transmitters with Options -M1, -M2, -M5, and -M6

Figure 26 - Flameproof Direct Connect AP/GP Transmitters with Options -M7 and -M8

Figure 27 - Direct Connect GP Transmitters for High Gauge Pressure Measurement

Biplanar AP and Biplanar GP Transmitters

Figure 28 - Biplanar AP/GP Transmitters

NOTES

1. CONDUIT CONNECTION 1/2 NPT OR M20, BOTH SIDES: PLUG UNUSED CONNECTION WITH SUPPLIED METAL PLUG.
2. PROCESS CONNECTOR CAN BE REMOVED AND CONNECTION MADE DIRECTLY TO PROCESS COVER USING 1/4 NPT INTERNAL THREAD IN PROCESS COVER. NOTE THAT WITH PROCESS CONNECTION CODE "0", THERE IS NO CONNECTOR.
3. PROCESS COVER CAN BE INVERTED MAKING OPTIONAL SIDE VENT A SIDE DRAIN.
4. FOR USERS WHO DESIRE THE PROCESS CONNECTOR ON THE RIGHT SIDE, ROTATE TRANSMITTER 180° AND RELOCATE PROCESS CONNECTOR (AND VENT SCREW, IF APPLICABLE).
5. DO NOT USE THE 1/4 NPT INTERNAL THREAD TO DIRECT-CONNECT THE TRANSMITTER WITHOUT A MOUNTING BRACKET.

Figure 29 - Biplanar AP/GP Transmitters with Options -D1, -D2, -D3, -D4, -D5, -D6, -D7, -D8, and -D9

IEC 61518 CONSTRUCTION OPTIONS

SINGLE ENDED PROCESS COVER OPTIONS	DOUBLE ENDED PROCESS COVER OPTIONS
-D1, -D3, -D5, -D7, -D9	-D2, -D4, -D6, -D8

Figure 30 - Biplanar AP/GP Transmitters with Options -M0 and -M9 (Standard Stainless Steel or Painted Steel Bracket)

Figure 31 - Biplanar AP/GP Transmitters with Option -M3 (Universal Bracket)

DP Transmitters

Figure 32 - DP Transmitters with Traditional Structure

NOTES:

1. CONDUIT CONNECTION 1/2 NPT, BOTH SIDES: PLUG UNUSED CONNECTION WITH SUPPLIED METAL PLUG.
2. PROCESS CONNECTORS MAY BE REMOVED AND TRANSMITTER MOUNTED DIRECTLY ON A MANIFOLD, OR CONNECTIONS MADE DIRECTLY TO PROCESS COVER USING 1/4 NPT INTERNAL THREAD IN PROCESS COVER.
3. PROCESS COVER CAN BE INVERTED MAKING OPTIONAL SIDE VENTS OR SIDE DRAINS.
4. PROCESS CONNECTORS CAN BE INVERTED TO GIVE EITHER 51, 54, OR 57 mm (2.0, 2.125, OR 2.25 in) CENTER-TO-CENTER DISTANCE BETWEEN HIGH AND LOW PRESSURE CONNECTIONS.
5. TOPWORKS CAN BE ROTATED TO ANY POSITION WITHIN ONE TURN COUNTERCLOCKWISE OF THE FULLY TIGHTENED POSITION.
6. PROCESS COVER END PLUGS ARE SUBSTITUTED FOR VENT SCREWS WHEN OPTIONAL SIDE VENTS (NOTE 3) ARE SPECIFIED.

Figure 33 - DP Transmitters with Low Profile 1 (LP1) Structure

NOTES:

1. CONDUIT CONNECTION 1/2 NPT OR M20, BOTH SIDES: PLUG UNUSED CONNECTION WITH SUPPLIED METAL PLUG.
2. PROCESS CONNECTORS MAY BE REMOVED AND TRANSMITTER MOUNTED DIRECTLY ON A MANIFOLD, OR CONNECTIONS MADE DIRECTLY TO PROCESS COVER USING 1/4 NPT INTERNAL THREAD IN PROCESS COVER.
3. THE TRANSMITTER'S LOW PROFILE STRUCTURE LP1 IS SHOWN IN THE VERTICALLY UPRIGHT POSITION. NOTE THE LOCATION OF THE STANDARD VENT/DRAIN SCREW. IN THIS CONFIGURATION, THE TRANSMITTER CAN BE VENTED OR IS SELF-DRAINING. ALSO RECOMMENDED IS A HORIZONTAL INSTALLATION WHERE THE INSTALLED ORIENTATION CAN BE SET TO ALLOW FOR VENTING OR DRAINING.
4. PROCESS CONNECTORS CAN BE INVERTED TO GIVE EITHER 51, 54, OR 57 mm (2.0, 2.125, OR 2.25 in) CENTER-TO-CENTER DISTANCE BETWEEN HIGH AND LOW PRESSURE CONNECTIONS.
5. TOPWORKS CAN BE ROTATED TO ANY POSITION WITHIN ONE TURN COUNTERCLOCKWISE OF THE FULLY TIGHTENED POSITION.

Figure 34 - DP Transmitters with Low Profile 2 (LP2) Structure**NOTES:**

1. CONDUIT CONNECTION 1/2 NPT OR M20, BOTH SIDES: PLUG UNUSED CONNECTION WITH SUPPLIED METAL PLUG.
2. PROCESS CONNECTORS MAY BE REMOVED AND TRANSMITTER MOUNTED DIRECTLY ON A MANIFOLD, OR CONNECTIONS MADE DIRECTLY TO PROCESS COVER USING 1/4 NPT INTERNAL THREAD IN PROCESS COVER.
3. THE TRANSMITTER'S LOW PROFILE STRUCTURE LP2 IS SHOWN IN THE RECOMMENDED VERTICAL UPRIGHT POSITION. NOTE THE STANDARD VENT OR DRAIN SCREWS. HORIZONTAL INSTALLATIONS ARE NOT RECOMMENDED.
4. PROCESS CONNECTORS CAN BE INVERTED TO GIVE EITHER 51, 54, OR 57 mm (2.0, 2.125, OR 2.25 in) CENTER-TO-CENTER DISTANCE BETWEEN HIGH AND LOW PRESSURE CONNECTIONS.
5. TOPWORKS CAN BE ROTATED TO ANY POSITION WITHIN ONE TURN COUNTERCLOCKWISE OF THE FULLY TIGHTENED POSITION.

Figure 35 - DP Transmitters with Traditional or LP2 Structure and Options -M1 and -M2 (Standard Style Mounting Bracket)

Figure 36 - DP Transmitters with Option -M3 (Universal Style Mounting Bracket Kit)**TYPICAL PIPE MOUNTING WITH LOW PROFILE STRUCTURE LP2****TYPICAL PIPE MOUNTING LOW PROFILE STRUCTURE LP1****TYPICAL PIPE MOUNTING WITH TRADITIONAL STRUCTURE****NOTE:**

FOR SURFACE MOUNTING CONFIGURATIONS, USE THE U-BOLT MOUNTING HOLES FOR ATTACHING THE BRACKET TO A SURFACE RATHER THAN TO THE U-BOLT ASSEMBLY. SURFACE MOUNTING BOLTS FOR ATTACHING THE BRACKET TO A SURFACE ARE USER SUPPLIED.

Figure 37 - DP Transmitters with LP1 or LP2 Structure Mounted on a Coplanar™ Manifold

Manifold	Dimension A	Dimension B
MC	11 mm (0.5 in)	199 mm (7.9 in)
MT3	22 mm (0.9 in)	210 mm (8.3 in)
